

# Homework 1

Due on Crowdmark  
January 17, 11 a.m.

Chaos, fractals, and dynamics  
MAT 335, Winter 2019

*Show your calculations, and explain your reasoning. Your goal is for the graders to understand how you got your answers, and to be convinced that your reasoning makes sense.*

## 1 Friendly formulas for iterates

Consider the map  $F(x) = 2x + 1$  on the state space  $\mathbb{R}$ .

- Write formulas for  $F^2(x)$ ,  $F^3(x)$ , and  $F^4(x)$  in terms of  $x$ .
- Write a formula for  $F^n(x)$  in terms of  $n$  and  $x$ .

## 2 Periodic points of the shift map

For the shift map  $S: \mathbf{2}^{\mathbb{N}} \rightarrow \mathbf{2}^{\mathbb{N}}$ , list the periodic points...

- ... with minimum period 1.
- ... with minimum period 2.
- ... with minimum period 3.

## 3 Eventually fixed points of a quadratic map

Consider the dynamical system with state space  $\mathbb{R}$  and dynamical map  $G(x) = x^2 - 2$ .

- Find the fixed points of  $G$ .
- Find every point whose orbit reaches a fixed point within four steps.
- Draw a “family tree” for the points you found in part b, with an arrow from each point  $y$  to its “parent”  $G(y)$ . Don’t forget to draw an arrow from each fixed point to itself!

## 4 Sweep away the 1s

Here’s a new dynamical system.

**State space:**  $\mathbf{2}^{\mathbb{N}}$ .

**Dynamical map:** Each 1 that’s followed by a 0 turns into a 0.

Let’s call this map  $A$ . As a demonstration, here’s what  $A$  does to one point in  $\mathbf{2}^{\mathbb{N}}$ .

$$\begin{aligned} w &= 0011100110111110100101110\dots \\ A(w) &= 0011\underline{0}001\underline{0}0111\underline{0}00\underline{0}00\underline{0}1\underline{1}00\dots \end{aligned}$$

The changed digits are underlined.

- a. Describe all the fixed points of  $A$ .
- b. Find a point in  $\mathbf{2}^{\mathbb{N}}$  which is not eventually fixed. Describe your point carefully, and convince a skeptical grader that it's not eventually fixed.

## 5 Dueling periods

Consider a dynamical system with state space  $Y$  and dynamical map  $M$ .

- a. Suppose  $a \in Y$  is both 2-periodic and 3-periodic. Find the minimum period of  $a$ .
- b. Suppose  $b \in Y$  is both 3-periodic and 5-periodic. Find the minimum period of  $b$ .
