Polynomials: Papers

Enrique Arrondo, Another elementary proof of the Nullstellensatz. *American Math. Monthly* 113 (2006), 169-171

Robert L. Benedetto, An elementary product identity in polynomial dynamics. *American Math. Monthly* 108:9 (November, 2001), 860-864

Soren Boel, Meier Carlsen & Niels Richard Hansen, A useful strengthening of the Stone-Weierstrass Theorem. *American Math. Monthly* 108:7 (Aug.-Sept, 2001), 642-643

Matthew Boelkins, Jennifer Miller & Benjamin Vugteveen, From Chebyshev to Bernstein: a tour of polynomials small and large. *College Math. Jour.* 37:3 (May, 2006), 194-204

Jason I. Brown & Charles J. Colbourn, Roots of the reliability polynomial. *SIAM J. Disc. Math.* 5:4 (November, 1992), 571-585

Holly Carley & Xin Li, The modulus of polynomials with zeros at the roots of unity. *American Math. Monthly* 107:8 (October, 2000), 742-748

B.C. Carlson & J. Todd, Zolotarev's first problem – the best approximation by polynomials of degree $\leq n - 2$ to $x^n - n\sigma x^{n-1}$ on $[-1, 1]$. *Aequationes Math.* 26 (1983), 1-33

Pantelis A. Damianou, Monic polynomials in $\mathbf{Z}[x]$ with roots in the unit disc. *American Math. Monthly* 108:3 (March, 2001), 253-257

K. Dilcher, K.B. Stolarsky, Zeros of the Wronskian of a polynomial. *J. Math. Anal. Appl.* 116 (1986), 473-488

J.D. Dixon, Polynomials with real roots. *Canad. Math. Bull.* 5 (1962), 259-263

D.S. Dummit, Solving solvable quintics. *Math. Comp.* 57 (1991), 387-401

William M. Faucette, A geometric interpretation of the solution of the general quartic polynomial. *American Math. Monthly* 103 (1996), 51-57

Dwight D. Freund, A genuine application of synthetic division, Descartes's rule of signs and all that stuff. *College Math. Journal* 26 (1995), 106-110

Walter Gautschi, Construction of Gauss-Christoffel quadrature formulas, *Math. of Computation* 22 (102), April, 1968, 251-270.

Louisa S. Grinstein, Upper limits to the real roots of polynomial equations. *American Math. Monthly* 60 (1953), 608-615

E. Grosswald, Recent applications of some old work of Laguerre. *American Math. Monthly* 86 (1979), 648-658

Pierre Jeanquartier, Une décomposition des fonctions lisses par rapport à un polynôme quasi-homogène. *C.R. Acad. Sci. Paris 325 (Série I)* (1997), 941-944

Dan Kalman & James E. White, Polynomial equations and circulant matrices. *American Math. Monthly* 108:9 (November, 2001), 821-840

J.B. Kelly, On factorization of polynomials. *American Math. Monthly* 60 (1953), 375-379

Emmanuel Kowalski, Bernstein polynomials and Brownian motion. *American Math. Monthly* 113 (2006), 865-886

Michel Langevin, Du théorème de Bernstein au Théorème de Walsh. *Séminaire de Théorie des Nombres* 1991-1992, 73-88

T.Y. Lam & K.H. Leung, On the cyclotomic polynomial $\Phi_{pq}(X)$. *American Math. Monthly* 103:7 (Aug.-Sept., 1996), 562-564

Xin Li, R.N. Mohapatra & R.S. Rodriguez, Bernstein-type inequalities for rational functions with prescribed poles. *J. London Math. Soc.* (2) 51 (1995), 523-531

H.E. Lomelí & C.L. García, Variations on a theorem of Korovkin. *American Math. Monthly* 113:8 (October, 2006), 744-749

Eugene Lukacs, Applications of Faà di Bruno's formula in mathematical statistics. *American Math. Monthly* 62 (1951), 340-348

Richard D. Neidinger & R. John Annen, III, The road to chaos is filled with polynomial curves. *American Math. Monthly* 103:8 (October, 1996), 640-653

G. Peyser, On the roots of the derivative of a polynomial with real roots. *American Math. Monthly* 74 (1967), 1102-1104

Allen D. Rogers, Integrals of fitted polynomials and an application of Simpson's Rule. *College Math. Journal* 38:2 (March, 2007), 124-130

Michael I. Rosen, Niels Hendrick Abel and equations of the fifth degree. *American Math. Monthly* 102 (1995), 495-505

Walter Rudin, Sums of squares of polynomials. *American Math. Monthly* 107:9 (November, 2000), 813-821

Robert S. Sery, A new method for finding prime-rich equations of the type $x^2 - x + c$. *J. Recreational Math.* 23 (1991), 47-54

Airton von Sohsten de Medeiros, The fundamental theorem of algebra revisited. *American Math. Monthly* 108:8 (October, 2001), 759-760
