The purpose of this handbook is to provide information about the graduate programs of the Department of Mathematics, University of Toronto. It includes detailed information about the department, its faculty members and students, a listing of core courses offered in 2018-2019, a summary of research activities, admissions requirements, application procedures, fees and financial assistance, and information about similar matters of concern to graduate students and prospective graduate students in mathematics.

This handbook is intended to complement the calendar of the university’s School of Graduate Studies, where full details on fees and general graduate studies regulations may be found.

1. DEPARTMENT OF MATHEMATICS

Mathematics has been taught at the University of Toronto since 1827. Since the first Canadian Ph.D. degree in mathematics was conferred to Samuel Beatty (under the supervision of John Charles Fields) in 1915, more than 400 Ph.D. degrees and 1,000 Master’s degrees have been awarded in this University. Many of our recent graduates are engaged in university teaching and a significant number of them hold administrative positions in universities or in the professional communities. Others are pursuing careers in industry (technological or financial), and in government.

The Department of Mathematics, University of Toronto is a distinguished faculty of more than sixty mathematicians. We have a large selection of graduate courses and seminars, and a diverse student body of domestic and international students, yet classes are small and the ratio of graduate students to faculty is low. We are in a unique position to take maximum advantage of the presence of the Fields Institute, which features special programs in pure and applied mathematics. Currently the department has 172 graduate students, of whom 23 are enrolled in the Master’s program, 149 in the Ph.D. program, 2 in non-degree programs, and 3 in the part-time Master’s program.

Opportunities for graduate study and research are available in most of the main fields of pure and applied mathematics. These fields include real and complex analysis, ordinary and partial differential equations, harmonic analysis, nonlinear analysis, several complex variables, functional analysis, operator theory, C*-algebras, ergodic theory, group theory, analytic and algebraic number theory, Lie groups and Lie algebras, automorphic forms, commutative algebra, algebraic geometry, singularity theory, Lie algebras, algebraic topology, set theory, set theoretic topology, mathematical physics, fluid mechanics, probability, optimal transportation, combinatorics, optimization, control theory, dynamical systems, computer algebra, cryptography, and mathematical finance.

We offer a research-oriented Ph.D., and Master’s program. Very strong students may be admitted directly to the Ph.D. program with a Bachelor’s degree; otherwise; it is normal to do a 1-year Master’s degree first. (Provisional admission to the Ph.D. program may be granted at the time of admission to the Master’s program.) The Master’s program may be extended to 16 months or 24 months for students who do not have a complete undergraduate preparation, or for industrial students engaged in a project.

There is a separate Master’s of Mathematical Finance Program not directly under the Department’s jurisdiction, with which some of our faculty members are associated.

During their studies here, graduate students are encouraged to participate in the life of the close community of U of T mathematics. Almost all of them do some work in connection with undergraduate teaching, either as tutorial leaders, markers, or, especially in later years of their program, instructors. There is a Mathematics Graduate Student Association, which organizes social and academic events and makes students feel welcome.
GRADUATE FACULTY MEMBERS

AKCOGLU, M.A. (Professor Emeritus) Ph.D. 1963 (Brown)
- Ergodic theory, functional analysis, harmonic analysis

ALEXAKIS, Spyros (Professor) Ph.D. 2005 (Princeton)
- Geometric analysis and general relativity

ARETAKIS, S. (Assistant Professor) Ph.D. 2012 (University of Cambridge)
- Differential Geometry, Analysis of PDEs, General Relativity

ARTHUR, J. (University Professor, Mossman Chair) B.Sc. 1966 (Toronto), M.Sc. 1967 (Toronto), Ph.D. 1970 (Yale)
- Representations of Lie groups, automorphic forms

BARBEAU, E. (Professor Emeritus) B.Sc. 1960 (Toronto), M.A. 1961 (Toronto), Ph.D. 1964 (Newcastle)
- Functional analysis, optimization under constraint, history of analysis, number theory

- Theory of quantum invariants of knots, links and three manifolds

BIERSTONE, E. (Professor) B.Sc. 1969 (Toronto), Ph.D. 1973 (Brandeis)
- Singularity theory, analytic geometry, differential analysis

BINDER, I. (Associate Professor) Ph.D. 1997 (Caltech)
- Harmonic and complex analysis, conformal dynamics

BLOOM, T. (Professor Emeritus) Ph.D. 1965 (Princeton)
- Several complex variables, differential geometry

BRAVERMAN, A. (Professor) Ph.D. 1998 (Tel Aviv)
- Representation theory, algebraic geometry

BURCHARD, A. (Professor) Ph.D. (Georgia Tech) 1994
- Functional analysis

CHOI, M.-D. (Professor Emeritus) M.Sc. 1970 (Toronto), Ph.D. 1973 (Toronto)
- Operator theory, operator algebras, matrix theory

- Operators on Hilbert spaces, matrix theory and applications (including numerical analysis)

DE SIMOI, J. (Assistant Professor) Ph.D. 2009 (University of Maryland)
- Stochastic and ergodic properties of smooth and piecewise smooth dynamical systems

DERZKO, N. (Associate Professor Emeritus) B.Sc. 1970 (Toronto), Ph.D. 1965 (Caltech)
- Functional analysis, structure of differential operators, optimization and control theory with applications to economics

ELLERS, E. (Professor Emeritus) Dr.rer.nat. 1959 (Hamburg)
- Classical groups

ELLIOTT, G. A. (Canada Research Chair and Professor) Ph.D. 1969 (Toronto)
- Operator algebras, K-theory, non-commutative geometry and topology

FRIEDLANDER, J. (University Professor) B.Sc. 1965 (Toronto), Ph.D. 1972 (Penn State)
- Analytic number theory

- Spectral theory of Schroedinger operators and localization

GRAHAM, I. (Professor Emeritus) B.Sc. 1970 (Toronto), Ph.D. 1973 (Princeton)
Several complex variables, one complex variable
GROECHENIG, M. (Assistant Professor) D.Phil 2013 (University of Oxford)

Higgs bundles and Hitchin systems, Algebraic K Theory, adeles, n-local fields, p-adic, motivic integration
GUALTIERI, M. (Professor) Ph.D. 2003 (Oxford)

Differential geometry and mathematical physics
HALPERIN, S. (Professor Emeritus) B.Sc. 1965 (Toronto), M.Sc. 1966 (Toronto), Ph.D. 1970 (Cornell)

Homotopy theory and loop space homology
HASLHOFER, R. (Assistant Professor) Ph.D. 2012 (ETH Zürich)

Geometric analysis, differential geometry, partial differential equations
HERZIG, F. (Associate Professor) PhD 2006 (Harvard)

Number theory, Galois representations, automorphic forms
IVRII, V. (Professor) Ph.D. 1973 (Novosibirsk)

Partial differential equations
JEFFREY, L. (Professor) Ph.D. 1992 (Oxford)

Symplectic geometry, geometric applications of quantum field theory
JERRARD, Robert (Professor) Ph.D. 1994 (Berkeley)

Nonlinear partial differential equations, Ginzburg-Landau theory
JURDJEVIC, V. (Professor Emeritus) Ph.D. 1969 (Case Western)

Systems of ordinary differential equations, control theory, global analysis
KAMNITZER, Joel (Professor) Ph.D. 2005 (Berkeley)

Geometric and combinatorial representation theory
KAPOVITCH, V. (Professor) Ph.D. 1997 (University of Maryland)

Global Riemannian geometry
KARSHON, Y. (Professor) Ph.D. 1993 (Harvard)

Equivariant symplectic geometry
KHANIN, K. (Professor) Ph.D. 1983 (Landau Institute, Moscow)

Dynamical systems and statistical mechanics
Khesin, B. (Professor) Ph.D. 1989 (Moscow State)

Poisson geometry, integrable systems, topological hydrodynamics
HOVANSKII, A. (Professor) Ph.D. 1973, Doctorat d’Etat 1987 (Steklov Institute, Moscow)

Algebra, geometry, theory of singularities
KIM, Henry (Professor) Ph.D. 1992 (Chicago)

Automorphic L-functions, Langlands’ program
KUDLA, S. (Canada Research Chair and Professor) Ph.D. 1971 (Harvard)

Automorphic forms, Arithmetic geometry and Theta functions
LORIMER, J.W. (Professor Emeritus) Ph.D. 1971 (McMaster)

Rings and geometries, topological Klingenberg planes, topological chain rings
MARCOLLI, M. (Professor) Ph.D. 1997 (University of Chicago)

Mathematical and theoretical physics, differential and algebraic geometry and topology, computational linguistics
McCANN, R. (Professor) Ph.D. 1994 (Princeton)

Mathematical physics, mathematical economics, inequalities, optimization, partial differential equations
McCOOL, J. (Professor Emeritus) Ph.D. 1966 (Glasgow)

Infinite group theory
MEINRENKEN, E. (Professor) Ph.D. 1994 (Universität Freiburg)
- Symplectic geometry
MENDELSOHN, E. (Professor Emeritus) Ph.D. 1968 (McGill)
- Block designs, combinatorial structures
MILMAN, P. (Professor) Ph.D. 1975 (Tel Aviv)
- Singularity theory, analytic geometry, differential analysis
MURASUGI, K. (Professor Emeritus) D.Sc. 1960 (Tokyo)
- Knot theory
MURNAGHAN, F. (Professor) Ph.D. 1987 (Chicago)
- Harmonic analysis and representations of $p$-adic groups
- Number theory
NABUTOVSKY, A. (Professor) Ph.D. 1992 (Weizmann Institute of Science)
- Geometry and logic
NACHMAN, A. (Professor) Ph.D. 1980 (Princeton)
- Inverse problems, partial differential equations, medical imaging
PANCHENKO, D. (Professor) Ph.D. 2002 (University of New Mexico)
- Applied probability
PUGH, M. (Professor) Ph.D. 1993 (Chicago)
- Scientific computing, nonlinear PDEs, fluid dynamics, computational neuroscience
PUSATERI, F. (Assistant Professor) PhD. 2011 (New York University)
- Partial differential equations, fluid dynamics, harmonic analysis and applications, Hamiltonian dynamics and small divisors
QUASTEL, J. (Professor) Ph.D. 1990 (Courant Institute)
- Probability, stochastic processes, partial differential equations
RAFI, Kasra (Associate Professor) Ph.D. 2001 (Stony Brook)
- Teichmüller space, geometric group theory, hyperbolic geometry
REPKA, J. (Professor) B.Sc. 1971 (Toronto), Ph.D. 1975 (Yale)
- Group representations, automorphic forms
ROSENTHAL, P. (Professor Emeritus) Ph.D. 1967 (Michigan)
- Operators on Hilbert spaces
ROSSMAN, B. (Assistant Professor) Ph.D. 2010 (MIT)
- Complexity theory and logic
ROTMAN, R. (Professor) Ph.D. 1998 (SUNY, Stony Brook)
- Riemannian geometry
SCHERK, J. (Associate Professor) D.Phil. 1978 (Oxford)
- Algebraic geometry
SECO, L. (Professor) Ph.D. 1989 (Princeton)
- Harmonic analysis, mathematical physics, mathematical finance
- Algebraic topology
SEN, D.K. (Professor Emeritus) Dr.es.Sc. 1958 (Paris)
- Relativity and gravitation, mathematical physics
SHANKAR, A. (Assistant Professor) Ph.D. 2012 (Princeton University)
- Number theory
SHARPE, R. (Professor Emeritus) B.Sc. 1965 (Toronto), M.Sc. 1966 (Toronto), Ph.D. 1970
(Yale)

- Differential geometry, topology of manifolds

SIGAL, I.M. (University Professor, Norman Stuart Robertson Chair in Applied Math) Ph.D. 1975 (Tel Aviv)

- Mathematical physics

- Fluid mechanics, particularly boundary layer theory

STINCHOBME, A. (Assistant Professor) Ph.D. 2013 (Courant Institute of Mathematical Sciences)

- Mathematical biology, scientific computing

- Partial differential equations, nonlinear analysis, numerical computations in fluid dynamics

TALL, F.D. (Professor Emeritus) Ph.D. 1969 (Wisconsin)

- Set theory and its applications, set-theoretic topology

TANNY, S.M. (Associate Professor Emeritus) Ph.D. 1973 (M.I.T.)

- Combinatorics, mathematical modeling in the social sciences

TIOZZO, G. (Assistant Professor) Ph.D. 2013 (Harvard)

- Dynamical systems and ergodic theory

TODORCEVIC, S. (Canada Research Chair and Professor) Ph.D. 1979 (Belgrade)

- Set theory and combinatorics

TSIMERMANN, J. (Assistant Professor) Ph.D. 2011 (Princeton University)

- Analytic number theory, Abelian varieties

VIRAG, B. (Canada Research Chair and Professor) Ph.D. 2000 (Berkeley)

- Probability

WEISS, W. (Professor) M.Sc. 1972 (Toronto), Ph.D. 1975 (Toronto)

- Set theory, set-theoretic topology

WU, H.-T. (Assistant Professor) Ph.D. 2011 (Princeton University)

- Data analysis, big datasets and their medical applications

YAMPOLSKY, M. (Professor) Ph.D. 1997 (SUNY, Stony Brook)

- Holomorphic and low-dimensional dynamical systems

YUEN, H. (Assistant Professor) Ph.D. 2016 (M.I.T.)

- Quantum computing, complexity theory, cryptography, information theory

ZHANG, Ke (Assistant Professor) PhD 2007 (Pennsylvania State University)

- Dynamical systems: Hamiltonian dynamics, weak KAM theory, Arnold diffusion, smooth dynamics.
2. THE GRADUATE PROGRAM

The Department of Mathematics offers graduate programs leading to Master of Science (M.Sc.) and Doctor of Philosophy (Ph.D.) degrees in mathematics, in the fields of pure mathematics and applied mathematics. Students admitted to our M.Sc. program are admitted either as “terminal master’s” students or as “doctoral stream” students, the latter implying the intent of continuing on to our Ph.D. program. Students admitted to the doctoral-stream master’s program are fully funded for one year at the master’s level. Funding is limited to four years at the PhD level.

The M.Sc. Program

The M.Sc. program may be done on either a full- or part-time basis. Full-time students normally complete the program in one full year of study; three years in some cases. Part-time students may take up to six years to complete the program. The degree requirements are as follows:

1a. Completion of 6 half-courses (or the equivalent combination of half- and full-year courses).
   A current listing is available from the mathematics department website. The normal course load for full-time graduate students is 3 courses in the fall term and 3 in the spring term. Doctoral-stream students are required to take four half-course credits in core material.

1b. Completion of the Supervised Research Project (MAT 4000Y). This project is intended to give the student the experience of independent study in some area of advanced mathematics, under the supervision of a faculty member. The supervisor and the student, with the approval of the graduate coordinator decide the topic and program of study. The project is normally undertaken during the summer session, after the other course requirements have been completed, and has a workload roughly equivalent to that of a full-year course.

2. M.Sc. Thesis Option (less common than option 1). Students who take this option will be required to take and pass four half-courses and submit an acceptable thesis which should consist of a minimum of 20-pages of scholarly work. A presentation of the thesis results, in the form of a seminar, is required.

The Ph.D. Program

The Ph.D. program normally takes three or four years of full-time study beyond the Master’s level to complete. A Master’s degree is a prerequisite. Expected progress in the program is outlined in the following table:

<table>
<thead>
<tr>
<th>Year</th>
<th>Course work; Pass at least 3 comprehensive exams; Select a thesis advisor.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Year 1</td>
<td>Supervisory committee selected by graduate coordinator; First annual supervisory committee progress report due.</td>
</tr>
<tr>
<td>Year 2</td>
<td>Presentation of preliminary thesis results to supervisory committee; Achieve PhD candidacy.</td>
</tr>
</tbody>
</table>

| Year 3   | |
|----------| |

10
The Ph.D. Direct-Entry Program

The Ph.D. Direct-Entry program normally takes four or five years of full-time to complete. Expected progress in the program is outlined in the following table:

<table>
<thead>
<tr>
<th>Year</th>
<th>Activities</th>
</tr>
</thead>
<tbody>
<tr>
<td>Year 1</td>
<td>6 courses of which four half-course credits in core material.</td>
</tr>
<tr>
<td>Year 2</td>
<td>Course work; Pass at least 3 comprehensive exams; Select a thesis advisor.</td>
</tr>
<tr>
<td>Year 3</td>
<td>Supervisory committee selected by the supervisor and the student; First annual supervisory committee progress report due.</td>
</tr>
<tr>
<td>Year 4</td>
<td>Presentation of preliminary thesis results to supervisory committee; Achieve PhD candidacy*.</td>
</tr>
<tr>
<td>Year 5</td>
<td>Thesis Content Seminar; Departmental PhD Thesis Examination; Final PhD Thesis Examination at the School of Graduate Studies.</td>
</tr>
<tr>
<td>Year 5 – October</td>
<td>Students interested in academic employment after the PhD must have major thesis results ready.</td>
</tr>
</tbody>
</table>

1. **Coursework for PhD (4-year program):** Completion of at least 6 half-courses (or the equivalent combination of half- and full-year courses). A current listing is available from the mathematics department website. Normally, 6 half-courses are taken in the first year of study (3 half-courses in the fall term and 3 in the spring term). It is strongly recommended that the student take some additional courses in later years.

2. **Coursework for PhD (Direct-Entry program):**

Completion of at least 8 half-courses (or the equivalent combination of half- and full-year courses). A current listing is available from the mathematics department website. Normally, 6 half-courses are taken in the first year of study (3 half-courses in the fall term and 3 in the spring term) and 2 half-courses in the second year. It is strongly recommended that the student do a Supervised Research Project (MAT 4000Y) in the summer between Year 1 and 2 and take some additional courses in other years.

2. **Comprehensive Examination:** The student is required to pass at least three comprehensive examinations in basic mathematics before beginning an area of specialization. The examinations in the five general areas (analysis (real and complex), algebra, topology, partial differential equations and probability) take place during a one-week period in early September. The passing grade on these examinations is A-/80%. Exemptions from individual exams will be given if the student has obtained a grade of A- or better in the corresponding core course(s). Syllabi for the pure mathematics comprehensive exams appear in Appendix A. Copies of mock examination questions
and/or past written examination papers are accessible to all candidates at http://www.math.utoronto.ca/cms/past-comprehensive-exams/.

Students with interests in applied mathematics or with Physics should refer to Appendix B for possible alternate comprehensive exams.

All exams are to be taken within 13 months of entering the Ph.D. program unless the Examination Committee grants permission in writing for a deferral. Ph.D. candidacy must be achieved by the end of the 3rd year.

*Supervisory Committee:* Ph.D. students must select a supervisor by the beginning of their second year in the Ph.D. program. In accordance with School of Graduate Studies’ regulations, a supervisory committee (SC) will be established for each Ph.D. student who has chosen a research area and a supervisor. This committee consists of three faculty members including the supervisor. The SC is expected to meet with the student at least annually, including on the last year of studies. Since some of the role of the SC is private and confidential, it is not appropriate to substitute these meetings with public lectures. The SC will file an annual written report with the graduate office.

The purpose of the Supervisory Committee (SC) is to monitor the student’s progress at least on an annual basis, keeping the following in mind.

No supervisor is perfect! The SC may be able to offer further mathematical and further career advice beyond what the supervisor alone may offer. This is relevant both at the start of studies, when mathematical advice is most in need, and towards the end of studies, when career advice is needed.

No student is perfect! The SC should note if a student is falling behind and should propose ways for the student to catch up, if necessary.

While most student-supervisor relationships are cordial and productive, occasional misunderstandings, miscommunications and cases of false expectations do occur. The SC should note if a student-supervisor relationship is heading wrong and make sure that steps are taken to fix the problems.

Further information about general graduate supervision is available at http://www.sgs.utoronto.ca/Documents/Supervision+Guidelines.pdf

3. **Thesis:** The main requirement of the degree is an acceptable thesis. This will embody an individual contribution to original research of a standard that warrants publication in the research literature. It must be written under the supervision of one or more members of the department. The student presents the thesis results in three stages.

   (i) **Thesis Content Seminar.** This is an opportunity for the student to present his/her thesis results to department members. The presentation frequently takes place within one of the regular departmental research seminars.

   (ii) **Departmental Oral Examination.** The student gives a 20-minute summary of the thesis and must defend it before a departmental examination committee. Copies of
the thesis should be available two weeks before the departmental oral examination. The committee may approve the thesis without reservations, or approve the thesis on condition that revision be made, or require the student to take another departmental oral examination.

(iii) **Final Oral Examination.** Eight weeks after the successful completion of the departmental oral, the student proceeds to the final oral examination conducted by the School of Graduate Studies. The thesis is sent to an external reader who submits a report two weeks prior to the examination; this report is circulated to members of the examination committee and to the student. The examination committee consists of four to six faculty members; it is recommended that the external reader attend the examination. The student gives a 20-minute summary of the thesis, which is followed by a question period.

As an alternative to the above examination procedure, it is possible, on the PhD candidate's initiative and with the agreement of the candidate's academic advisor, to substitute a 50 minute presentation for the 20 minute presentation in the departmental oral examination and the final oral examination. The department will attempt to accommodate such requests though technical and administrative considerations (space and scheduling issues, communication issues when some committee members are not physically present, compliance issues with SGS rules, etc.) may prevent this alternative. It is recommended that such requests will be made at least 4 weeks in advance of the departmental examination.

4. Students are expected to become extensively involved in departmental life (seminars, colloquia and related activities).

### 3. Administration of the Graduate Program

A central administration authority called the School of Graduate Studies establishes the basic policies and procedures governing all graduate study at the University of Toronto. Detailed information about the School is obtained in its calendar, distributed to new graduate students during registration week.

The Department of Mathematics has its own graduate administrative body—the graduate committee—composed of 12-15 faculty members appointed by the Chair of the Department, and five graduate students elected by the Mathematics Graduate Students Association. One of the faculty members is the Graduate Coordinator, who is responsible for the day-to-day operation of the program. The graduate committee meets frequently throughout the year to consider matters such as admissions, scholarships, course offerings, and departmental policies pertaining to graduate students. Student members are not permitted to attend meetings at which the agenda concerns confidential matters relating to other students. Information regarding appeals of academic decisions is given in the Grading Procedures section of the Calendar of the School of Graduate Studies. Students may also consult the Graduate Coordinator (or the student member of the departmental Graduate Appeals Committee) regarding information about such appeals.
General Outline of the 2018-2019 Academic Year

Registration  July 16 – September 14, 2018
Fall Term     Classes begin Monday, September 10, 2018
Spring Term   Classes begin Monday, January 7, 2019

Official Holidays (University Closed):

Labour Day     Monday, September 3, 2018
Thanksgiving Day Monday, October 8, 2018
Christmas/New Year Monday, December 24, 2018 – Friday, January 4, 2019
Family Day     Monday, February 18, 2019
Good Friday    Friday, April 19, 2019
Victoria Day   Monday, May 20, 2019
Canada Day     Monday July 1, 2019
Civic Holiday  Monday, August 5, 2019
4. GRADUATE COURSES

The following is a list and description of the core courses offered to graduate students in the 2018-2019 academic year. These are the basic beginning graduate courses. They are designed to help the student broaden and strengthen his/her general background in mathematics prior to specializing towards a thesis. A student with a strong background in the area of any of the core courses should not take that particular course. A complete listing of all graduate courses on offer in a given year is available from the mathematics department website. These include cross-listed graduate courses and topics courses. In addition, graduate students may take several intermediate (300-level) undergraduate courses (listed in the Faculty of Arts and Science Calendar) if their background is felt to be weak in some area; no graduate course credit is given for these courses.

There are three other means by which graduate students may obtain course credit, apart from completing the formal courses listed on the following pages. In each of these cases, prior approval of the graduate coordinator is required.

1. Students may take a suitable graduate course offered by another department. Two-thirds of the course requirements for each degree should be in the Mathematics Department.

2. It is sometimes possible to obtain course credit for appropriately extensive participation in a research seminar (see Research Activities section).

3. It is also possible to obtain a course credit by working on an individual reading course under the supervision of one of the faculty members, provided the material covered is not available in one of the formal courses or research seminars. (Note: this is distinct from the MAT 4000Y Supervised Research Project required of M.Sc. students.)

Most courses meet for three hours each week, either in three one-hour sessions or two longer sessions. For some courses, particularly those cross-listed with undergraduate courses, the times and locations of classes will be set in advance of the start of term. For other courses, the times and locations of classes will be established at organizational meetings during the first week of term, so that a time convenient for all participants may be arranged. During registration week, students should consult the math department website for class and organization meeting times and locations: http://www.math.utoronto.ca/cms/graduate-program/current-students-grad/2018-2019-graduate-courses-timetable/.

CORE COURSES

MAT 1000HF (MAT 457H1F)
REAL ANALYSIS I
J. De Simoi

Measure Theory: Lebesgue measure and integration, convergence theorems, Fubini's theorem, Lebesgue differentiation theorem, abstract measures, Caratheodory extension theorem, Radon-Nikodym theorem.

Textbook:
References:
Elias Stein and Rami Shakarchi, Measure Theory, Integration, and Hilbert Spaces
Elliott H. Lieb and Michael Loss, Analysis, AMS Graduate Texts in Mathematics, 14 (either edition)
H. L. Royden, Real Analysis, Macmillan, 1998
A. N. Kolmogorov and S. V. Fomin: Introductory Real Analysis, 1975

MAT 1001HS (MAT 458H1S)
REAL ANALYSIS II
K. Zhang

Fourier analysis: Fourier series and transforms, Fourier inversion and Plancherel formula, estimates and convergence results, topological vector spaces, Schwartz space, distributions.

Functional Analysis: The main topic here will be the spectral theorem for bounded self-adjoint operators, possibly together with its extensions to unbounded and differential operators

Textbook:

References:
E. Lorch, Spectral Theory.

MAT 1002HS (MAT 454H1S)
COMPLEX ANALYSIS
E. Bierstone

2. Harmonic functions. Poisson’s integral formula and Dirichlet’s problem
3. Conformal mapping, Riemann mapping theorem.
4. Analytic continuation, Monodromy Theorem, Riemann surfaces.
5. Modular functions and the Picard Theorems.
6. Other topics are possible, like product theorems, elliptic functions, and non-isolated removability theorems.

Recommended prerequisites: A first course in complex analysis and a course in real analysis. Measure theory is not required.

Main References:
L. Ahlfors: Complex Analysis, 3rd Edition
Stein and Shakarchi: Complex Analysis

Additional References:
T. Gamelin, Complex Analysis
W. Rudin, Real and Complex Analysis, 2nd or 3rd edition
D. Sarason, Complex Function Theory
MAT 1060HF
PARTIAL DIFFERENTIAL EQUATIONS I
F. Pusateri

This is a basic introduction to partial differential equations as they arise in physics, geometry and optimization. It is meant to be accessible to beginners with little or no prior knowledge of the field. It is also meant to introduce beautiful ideas and techniques, which are part of most analysts’ basic bag of tools. A key theme will be the development of techniques for studying non-smooth solutions to these equations.

MAT 1061HS
PARTIAL DIFFERENTIAL EQUATIONS II
C. Sulem

This course will consider a range of mostly nonlinear partial differential equations, including elliptic and parabolic PDE, as well as hyperbolic and other nonlinear wave equations. In order to study these equations, we will develop a variety of methods, including variational techniques, and fixed point theorems. One important theme will be the relationship between variational questions, such as critical Sobolev exponents, and issues related to nonlinear evolution equations, such as finite-time blowup of solutions and/or long-time asymptotics.

The prerequisites for the course include familiarity with Sobolev and other function spaces, and in particular with fundamental embedding and compactness theorems.

Other topics in PDE will also be discussed.

Textbook:

References:

**MAT 1100HF**  
**ALGEBRA I**  
A. Shankar

**Group Theory**: Isomorphism theorems, group actions, Jordan-Hölder theorem, Sylow theorems, direct and semidirect products, finitely generated abelian groups, simple groups, symmetric groups, linear groups, nilpotent and solvable groups, generators and relations.

**Ring Theory**: Rings, ideals, Euclidean domains, principal ideal domains, and unique factorization domains.

**Modules**: Modules and algebras over a ring, tensor products, modules over a principal ideal domain.

**Recommended prerequisites** are a full year undergraduate course in Linear Algebra and one term of an introductory undergraduate course in higher algebra, covering, at least, basic group theory. While this material will be reviewed in the course, it will be done at "high speed", assuming that you have already some familiarity with the basics. You will be very well prepared indeed, if you have no difficulties reading and understanding the book, listed here under "Other References", M. Artin: Algebra that the author wrote for his undergraduate algebra courses at MIT.

**Textbooks:**  
Dummit and Foote: Abstract Algebra, 2nd Edition

**Other References:**  
Jacobson: Basic Algebra, Volumes I and II.  
Cohn: Basic Algebra  
M. Artin: Algebra.

**MAT 1101HS**  
**ALGEBRA II**  
J. Arthur

**Fields**: Algebraic and transcendental extensions, normal and separable extensions, fundamental theorem of Galois theory, solution of equations by radicals.

**Commutative Rings**: Noetherian rings, Hilbert basis theorem, invariant theory, Hilbert Nullstellensatz, primary decomposition, affine algebraic varieties. Structure of semisimple algebras, application to representation theory of finite groups.

**Textbooks:**  
Dummit and Foote: Abstract Algebra, 3rd Edition

**Other References:**  
Jacobson: Basic Algebra, Volumes I and II.  
Cohn: Basic Algebra  
M. Artin: Algebra.
MAT 1300HF
TOPOLOGY I
M. Gualtieri

Local differential geometry: the differential, the inverse function theorem, smooth manifolds, the tangent space, immersions and submersions, regular points, transversality, Sard’s theorem, the Whitney embedding theorem, smooth approximation, tubular neighborhoods, the Brouwer fixed point theorem.

Differential forms: exterior algebra, forms, pullbacks, integration, Stokes’ theorem, div grad curl and all, Lagrange’s equation and Maxwell’s equations, homotopies and Poincare’s lemma, linking numbers.

Prerequisites: Linear algebra; vector calculus; point set topology
Textbook: John M. Lee: Introduction to Smooth Manifolds

MAT 1301HS
TOPOLOGY II
V. Kapovitch

Fundamental groups: paths and homotopies, the fundamental group, coverings and the fundamental group of the circle, Van-Kampen’s theorem, the general theory of covering spaces.

Homology: simplices and boundaries, prisms and homotopies, abstract nonsense and diagram chasing, axiomatics, degrees, CW and cellular homology, subdivision and excision, the generalized Jordan curve theorem, salad bowls and Borsuk-Ulam, cohomology and de-Rham’s theorem, products.

Textbook: Allen Hatcher, Algebraic Topology

Recommended Textbooks: Munkres, Topology
Munkres, Algebraic Topology

MAT1600HF
MATHEMATICAL PROBABILITY I
B. Virag

The class will cover classical limit theorems for sums of independent random variables, such as the Law of Large Numbers and Central Limit Theorem, conditional distributions and martingales, metrics on probability measures.

Recommended prerequisite: Real Analysis I.

MAT1601HS
MATHEMATICAL PROBABILITY I
B. Virag

The class will cover some of the following topics: Brownian motion and examples of functional central limit theorems, Gaussian processes, Poisson processes, Markov chains, exchangeability.

**Recommended prerequisites:**
Real Analysis I and Probability I.

**Textbook:**

---

2018-19 TOPICS COURSES AND CROSS-LISTED UNDERGRADUATE/GRADUATE COURSES

A listing is available from the graduate website: [https://www.math.toronto.edu/cms/graduate-program/current-students-grad/2018-2019-graduate-courses-descriptions/](https://www.math.toronto.edu/cms/graduate-program/current-students-grad/2018-2019-graduate-courses-descriptions/)

**INDIVIDUAL READING COURSES**

Students requiring individual course numbers:

**MAT 1900Y/1901H/1902H**
READING IN PURE MATHEMATICS
Numbers assigned for students wishing individual instruction in an area of pure mathematics.

**MAT 1950Y/1951H/1952H**
READING IN APPLIED MATHEMATICS
Numbers assigned for students wishing individual instruction in an area of applied mathematics.

**COURSE IN TEACHING TECHNIQUES**

The following course is offered to help train students to become effective lecturers. It is not for degree credit and is not to be offered every year.

**MAT 1499HS**
TEACHING LARGE MATHEMATICS CLASSES
J. Repka

The goals of the course include techniques for teaching large classes, sensitivity to possible problems, and developing an ability to criticize one’s own teaching and correct problems.

Assignments will include such things as preparing sample classes, tests, assignments, course outlines, designs for new courses, instructions for teaching assistants, identifying and dealing with various types of problems, dealing with administrative requirements, etc.

The course will also include teaching a few classes in a large course under the supervision of the instructor. A video camera will be available to enable students to tape their teaching for later (private) assessment.
COURSES FOR GRADUATE STUDENTS FROM OTHER DEPARTMENTS

(Math graduate students cannot take the following courses for graduate credit.)

MAT 2000Y  READINGS IN THEORETICAL MATHEMATICS
MAT 2001H  READINGS IN THEORETICAL MATHEMATICS I
MAT 2002H  READINGS IN THEORETICAL MATHEMATICS II

(These courses are used as reading courses for engineering and science students in need of instruction in special topics in theoretical mathematics. These course numbers can also be used as dual numbers for some third and fourth year undergraduate mathematics courses if the instructor agrees to adapt the courses to the special needs of graduate students. A listing of such courses is available in the 2014-2015 Faculty of Arts and Science Calendar. Students taking these courses should get an enrolment form from the graduate studies office of the Mathematics Department. Permission from the instructor is required.)

PROFESSIONAL DEVELOPMENT PROGRAMS OFFERED BY SGS

English Language and Writing Support (ELWS)
The English Language and Writing Support program, at the School of Graduate Studies, offers individual consultations, single-session workshops, and free non-credit courses for both native and non-native speakers of English. Information and registration: [http://www.sgs.utoronto.ca/currentstudents/Pages/English-Language-and-Writing-Support.aspx](http://www.sgs.utoronto.ca/currentstudents/Pages/English-Language-and-Writing-Support.aspx)

Graduate Professional Skills Program (GPS)
The Graduate Professional Skills program (GPS) is a new initiative from the School of Graduate Studies to help doctoral-stream graduate students become fully prepared for their future. It focuses on skills beyond those conventionally learned within a disciplinary program, skills that may be critical to success in the wide range of careers that graduates enter, both within and outside academe. GPS can help you to communicate effectively, plan and manage your time, be entrepreneurial, understand and apply ethical practices, and work effectively in teams and as leaders. The GPS consists of a range of optional “offerings” with a time commitment roughly equivalent to 60 hours of work. Its successful completion will be recognized by a transcript notation. For more information: [http://www.sgs.utoronto.ca/currentstudents/Pages/Professional-Development.aspx](http://www.sgs.utoronto.ca/currentstudents/Pages/Professional-Development.aspx)

MITACS
Mitacs ([www.mitacs.ca](http://www.mitacs.ca)) is a national research organization offering unique research and training programs to graduate students and postdoctoral fellows (PDFs) in Canada. For more information: [http://www.sgs.utoronto.ca/currentstudents/Pages/International-Student-Awards.aspx](http://www.sgs.utoronto.ca/currentstudents/Pages/International-Student-Awards.aspx)
5. RESEARCH ACTIVITIES

The Department of Mathematics offers numerous research activities, in which graduate students are encouraged to participate. Research seminars are organized informally at the beginning of each year by one or more faculty members and/or students, and are offered to faculty and graduate students on a weekly basis throughout the year. The level and specific content of these seminars varies from year to year, depending upon current faculty and student interest, and upon the availability and interests of invited guest lecturers. The following research seminars were offered in the past year:

Algebra and Geometry Seminar
Analysis and Applied Math Seminar
Dynamics Seminar
Fields Colloquium/Seminar in Applied Math
Ganita Seminar
Geometric Representation Theory Seminar
Geometry and Topology Seminar
Graduate Student Seminar
Homological Methods Seminar
Inverse Problems and Image Analysis Seminar
Number Theory/Representation Theory Seminar
Operator Theory Seminar
Probability, Geometry and Groups Learning Seminar
Probability Study Group
Student Number Theory Seminar
Symplectic Seminar
Teichmüller Theory and Dynamics Learning Seminar
Toronto Probability Seminar
Toronto Set Theory Seminar
Trace Formula Working Seminar
Women in Mathematics
Working Group in Hamiltonian Systems Seminar

A full list of events in the department can be found in this link:
https://seminars.math.toronto.edu/seminars/list/events.py/process?start

In addition to the weekly seminars, there are numerous special seminars throughout the year, a series of colloquia, and an active program of visiting lecturers:

Departmental Colloquium
Blyth Lecture Series

Graduate students are also encouraged to attend lectures and seminars offered by other departments.
Due to the large numbers of applications received in the Department of Mathematics each year, serious consideration will only be given to applicants with strong backgrounds in theoretical mathematics and with first class academic standing.

Application materials and admission requirements are available from the Department of Mathematics website: [http://www.math.utoronto.ca/cms/potential-students-grad/](http://www.math.utoronto.ca/cms/potential-students-grad/)

Please read all instructions carefully and note the deadlines. In addition, the Department of Mathematics requires three letters of reference. The letters must be from three people familiar with your mathematical work, giving their assessment of your potential for graduate study and research in mathematics.

It is essential that all incoming graduate students have a good command of English. Facility in the English language must be demonstrated by all applicants educated outside Canada whose primary language is not English. This requirement is a condition of admission and should be met before application. Here are three ways to satisfy this requirement: (1) Test of English as a Foreign Language (TOEFL): (a) internet-based test (iBT), minimum score of 22/30 for both the Writing and Speaking sections, with an overall minimum TOEFL score of 93/120, or (b) paper-based test, minimum score 580, with TWE (Test of Written English), minimum score 5.0; (2) a score of at least 85 on the Michigan English Language Assessment Batter (MELAB); (3) a score of at least 7.0 on the International English Language Testing Service (IELTS). Applicants are required to satisfy this requirement by December 20, so that scores are available at the time applications are considered.

**Suggested prerequisites**

We recognize that our students come from many different places and with a significant range of differing backgrounds. Hence there is no fixed and rigid list of prerequisites, and applicants are considered and often admitted even if their formal previous mathematical education is very different from the informal list of prerequisites below. **In general, we’d like to see some sort of overall mathematical maturity and experience, and we appreciate (though we do not require) evidence of in-depth concentration in one mathematical discipline or another.**

Yet here is a non-binding list of courses that are recommended to applicants from within the University of Toronto in order to be seriously considered for the doctoral stream master’s program. Students coming from other institutions will have to make the appropriate substitutions:

*2nd year Advanced ODE’s, e.g. MAT 267*

*Real Analysis, e.g. MAT 337*

3\textsuperscript{rd} year \textit{Real Analysis}, e.g. MAT 357H

3\textsuperscript{rd} year \textit{Complex Analysis}, e.g. MAT 354H

Approximate syllabus: Complex numbers, the complex plane and Riemann sphere, Möbius transformations, elementary functions and their mapping properties, conformal mapping, holomorphic functions, Cauchy’s theorem and integral formula. Taylor and Laurent series, maximum modulus principle, Schwarz’s lemma, residue theorem and residue calculus.

\textit{Linear Algebra}, e.g. MAT 224H

3\textsuperscript{rd} year \textit{Algebra}, e.g. MAT 347Y

Approximate syllabus: Groups, subgroups, quotient groups, Sylow theorems, Jordan-Hölder theorem, finitely generated abelian groups, solvable groups. Rings, ideals, Chinese remainder theorem; Euclidean domains and principal ideal domains: unique factorization. Noetherian rings, Hilbert basis theorem. Finitely generated modules. Field extensions, algebraic closure, straight-edge and compass constructions. Galois theory, including insolvability of the quintic.

3\textsuperscript{rd} year \textit{Topology}, e.g. MAT 327H

In addition to that we also value some ability in computer programming and some background in physics (though neither is required).

\textit{Groups and Symmetries}, e.g. MAT 301H

\textit{Complex Variables}, e.g. MAT 334H

Approximate syllabus: Theory of functions of one complex variable, analytic and meromorphic functions. Cauchy’s theorem, residue calculus, conformal mappings, introduction to analytic continuation and harmonic functions.
7. POLICY ON FINANCIAL SUPPORT, FEES AND FINANCIAL ASSISTANCE

Department of Mathematics Policy on Financial Support of Graduate Students

**Ph.D. Students:** At the time of admission to the Ph.D. program, students will normally be guaranteed support for a period of 4 to 5 years (five years in the case of students admitted directly from a Bachelor’s program), except that students who complete their degree requirements earlier will not be supported past the end of the academic year in which they finish. This guarantee will be made up of a mix of fellowships (including external awards such as NSERC, OGS), teaching assistantships and other sources of funding, at the discretion of the Department; and is subject to satisfactory academic progress, the maintenance of good standing, and in the case of teaching assistantships, satisfactory performance in that role, as judged by the Department. Absent this, support may be reduced, suspended, or discontinued.

In exceptional circumstances some funding may be provided to students in a subsequent year, but the Department expects that students will normally have completed their degree requirements within the four-year period.

**M.Sc. Students:** Students who are granted provisional admission to the Ph.D. program at the time of admission will receive financial support, for one year only.

All full-time students in the first or second year of a Master’s program are eligible for teaching assistant work (subject to availability and satisfactory performance).

**Fees**
Listed below are the fees for the 2018-19 academic session, including incidental fees and the health insurance premium for visa students. For detailed information, visit [http://www.fees.utoronto.ca/](http://www.fees.utoronto.ca/)

**Domestic Fees (updated)**

Financial Assistance

Below is a list of those types of financial assistance most commonly awarded to mathematics graduate students in 2017-18. This information should also be applicable for students who wish to apply for the 2018-19 academic year; the deadlines for applications will be altered slightly in accordance with the 2018-19 calendar. Some awards are available from external funding agencies; others come from within the University.

Less common scholarships, offered by smaller or foreign funding agencies, are also available; information about these may be found at: http://www.sgs.utoronto.ca/currentstudents/Pages/Financing-Your-Graduate-Education.aspx. Announcements are made to students.

Vanier Canada Graduate Scholarships (Vanier CGS) Program

Value: $50,000 per annum for a maximum of 3 years

Eligibility: a student must be nominated by a Canadian university. Vanier Scholarships must be held by the student at the university that nominated them. The scholarships are not transferable: they may not be taken to another university. Applicants do not have to be registered as doctoral students at the time of application, but must be registered as doctoral students at a Canadian university when they take up the Vanier Scholarship. Canadian citizens, landed immigrants (permanent residents), and international students are all eligible for Vanier Scholarships. Students who have held or are currently holding Tri-Agency scholarship funding for their doctoral program are not eligible to
Natural Sciences and Engineering Research Council (NSERC) Postgraduate Scholarships and Canada Graduate Scholarships

Value: approx. $17,300-$35,000 for a twelve month period
Eligibility: Canadian citizens, permanent residents; first class academic standing; full-time attendance
Application: apply through the university you are currently attending; application available at www.nserc.ca
Deadline: early October. Consult department for deadline.

Ontario Graduate Scholarships (OGS)
Value: approx. $5,000 per term for two or three terms
Eligibility: no citizenship restrictions; first class academic standing; full-time attendance at an Ontario university
Application: apply through the department you wish to attend (http://www.sgs.utoronto.ca/currentstudents/Pages/Ontario-Graduate-Scholarship.aspx).
Deadline: Consult department for deadline.

Queen Elizabeth II Graduate Scholarship in Science and Technology (QEII-GSST)
Value: approx. $15,000 for a twelve month period
Eligibility: Canadian citizens, permanent residents; first class academic standing; full-time attendance
Application: OGS application (see above).
Deadline: Consult department for deadline.

University of Toronto Fellowships
Value: minimum $1,000
Eligibility: no citizenship restrictions; at least an A- average; full-time attendance at the University of Toronto
Application: graduate school applicants will be considered automatically
Deadline: early December

Connaught International Scholarship for Doctoral Students (entrance scholarship)
Value: The effective value awarded to each student will be $35,000.00 total (including tuition). Scholarships will continue in the same form throughout the normal period in the funded cohort, provided progress.
Application: A graduate school application. Graduate units decide nominations in the winter semester.
Deadline: To be considered, international doctoral applicants must submit a graduate school application by early December

Ontario Trillium Scholarship (OTS) for Doctoral Students (entrance scholarship)
The Ontario Trillium Scholarship (OTS) is designed to attract international PhD students to the University of Toronto.
Value: Each OTS will be worth $40,000 per annum (including tuition), and is renewable for four
years, provided progress.
*Application*: A graduate school application. Graduate units decide nominations in the winter semester.
*Deadline*: To be considered, international doctoral applicants must submit a graduate school application by early December

**Research Assistantships**
*Value*: a limited amount of funds is available for academically worthy students
*Eligibility*: no citizenship restrictions; full-time attendance; high academic standing
*Application*: graduate school applicants will be considered automatically
*Deadline*: early December

**Teaching Assistantships**
*Value*: $46.22 per hour; number of hours per week will not exceed a maximum average of 8
*Eligibility*: full-time students who are accepted by the Mathematics Department (subject to satisfactory performance); may be held in conjunction with other awards
*Application*: forms available in May from the Graduate Office, Department of Mathematics
*Deadline*: early June

**Doctoral Thesis Completion Award (DCA)**
The Department of Mathematics receives funding from the university to help support students beyond the funded cohort: Doctoral Thesis Completion Award. The policy of the mathematics department is to spend its DCA funds aiming to bring the total amount of after-fees funding (including both external and other internal sources) for all fifth-year students who are in good academic standing (including a satisfactory supervisory committee report) to be as close to uniform within that group as feasible, and in as much as possible, close to the level of support funded-cohort students are receiving. Shall there be any DCA funds remaining after that, these funds will be distributed on a similar basis among sixth year students.

**Arts and Science Conference Travel Grant**
An important part of the research process is the presentation of one’s work at scholarly conferences. The purpose of this program is to provide additional funds to enable graduate students in the Faculty of Arts and Science to travel to conferences where they will present their work.
*Value*: varies to a maximum of $1,000
*Eligibility*: no citizenship restrictions; award holders must be doctoral students in the funded cohort. Graduate students may hold only one Travel Grant during their time in the department.
*Eligible Expenses*: Conference registration and abstract submission costs, travel and living expenses.
*Application*: Applications available from the Math Graduate Office; deadline October 1.
*Selection Criteria*: Past academic performance, need to attend conference for professional development, quality of abstract. Preference will be given to students near the end of their degrees.

**School of Graduate Studies Conference Grant**
The School of Graduate Studies Conference Grant program is intended to encourage students in doctoral-stream programs to actively present their research at a regional, national or international conference or equivalent academic event early in their program.
*Value*: The value will be based on the event’s registration-fee (at the student-rate) as well as a pre-determined amount based on the location of the event.
*Eligibility*: no citizenship restrictions; award holders must be doctoral-stream students; registered
full-time at the time of application and at the time of conference attendance; in good standing; an active participant. Applicants need not have received confirmation of their participation in the conference at the time of application.

Application: For more information and deadlines:
http://www.sgs.utoronto.ca/currentstudents/Pages/SGS-Conference-Grant.aspx

Selection Criteria: Preference will be given to applicants who are in the early stage of their academic program, have not previously attended a conference during their current program and/or who have not previously received an SGS Conference Grant. The SGS Conference Grant is not intended to be the principal source of funding. Applicants are expected to seek funding from other sources, and must list other resources that will or may be used to support their conference attendance.

8. OTHER INFORMATION

The Department of Mathematics is located in the heart of the University of Toronto, which in turn is located in the heart of downtown Toronto. Students therefore have access to a wide range of facilities and services. A list appears below.

Facilities and Services

Library Facilities

The University of Toronto Library system is the 4th largest academic research library in North America. It contains over 4 million print volumes as well as a vast assortment of electronic resources. The Mathematical Sciences Library (MSL) is in the same building as the Mathematics Department. The majority of mathematics journals held by the University of Toronto are housed in the MSL, with some being held in the Gerstein Science Information Centre. The MSL's collection also contains over 20,000 books. The MSL website includes an interface with the UofT catalogue that includes the collections of all the libraries on the St. George, Mississauga, and Scarborough campuses and includes links to online books, journals and abstract and indexing databases including MathSciNet. The MSL offers a wireless environment with study spaces for research. Each graduate student in mathematics receives a photocopying allowance. The Gerstein Science Information Centre also has a comprehensive collection of mathematics books up to 1998.

St. George T-Card Office
Koeffler Student Service Centre
214 College Street, Room 12
(Tel) 416-946-8047 │ tcard.office@utoronto.ca │ http://tcard.utoronto.ca/

• University of Toronto TCard is a photo ID smartcard which provides identification for academic purposes, student activities and services, facility access and a Library Card.

Mathematics Library
40 St. George Street, Room 6141
Toronto, Ontario M5S 3G3
(Tel) 416-978-8624 │ (Fax) 416-978-4107
mathlib@math.toronto.edu
http://www.library.utoronto.ca/math/
• Hours: M-F, 9 – 5; Summer hours: M-F, 9 – 4:30
Computer Facilities

All faculty and graduate students can request accounts on the main departmental server and the departmental compute server. The main server, coxeter, is a six-core IBM x3630 M3 server with 32GB of RAM, and the compute server, sphere, is a twelve-core IBM x3630 M3 server with 64GB of RAM, both running Red Hat Enterprise Linux 6. These accounts give access to electronic mail facilities which are also remotely accessible via encrypted IMAP/Submission or webmail, to the internet including the ability to put a webpage on the departmental webserver, to many mathematical software packages (for example, Matlab, Mathematica, pari/gp, octave), to scientific and other graphics programs (most of the symbolic manipulators, gimp), to software compilers (supporting, for example, fortran77, fortran95, C, C++, java), to a rich mathematical software library, to mathematical typesetting programs (TeX, LaTeX), etc.

See [http://www.math.toronto.edu/intro.html](http://www.math.toronto.edu/intro.html) for a very brief introduction to the computing resources in the department. There is a public Computer Room (BA6200) in addition to machines in individual offices. University-managed wireless connectivity (the SSID is UofT) is available for most people in the department; you will need your UTORid for this.

Application forms for computer accounts on our systems are available from the Departmental Office (BA6290) and the Mathematics Graduate Office.

Housing

The university operates five graduate student residences-apartment complexes on or near the campus, ranging from unfurnished family apartments to the more conventional bed-and-board residences. In addition, the University Housing Service provides a listing of privately owned rooms, apartments and houses available for students to rent.

Students should keep in mind that accommodation could be expensive and limited, particularly in downtown Toronto. It is therefore advisable to make inquiries well in advance and to arrive in Toronto a few days prior to the start of term. Students can expect to pay anywhere between $500 to $1,000 per month on accommodation and from $300 to $500 per month on food, travel and household necessities.

University Housing Service

214 College Street, 1st Floor
Toronto, Ontario M5T 2Z9
(Tel) 416-978-8045  (Fax) 416-978-1616
housing.services@utoronto.ca
[http://www.housing.utoronto.ca](http://www.housing.utoronto.ca)
**Health Services**

The University of Toronto Health Service offers medical services and referrals to private physicians for University of Toronto students. Most of these services are free of charge if you are covered under Ontario Health Coverage (OHIP), or the University Health Insurance Plan (UHIP) for visa students. OHIP application forms and information are available from the University Health Services. UHIP coverage for visa students is compulsory and is arranged during registration at the Centre for International Experience.

**Health & Wellness Centre**

- University Health Insurance Plan (UHIP) registration at Cumberland House

**Students with Disabilities**

Services and facilities for students with disabilities are available at the University of Toronto. The University of Toronto’s Accessibility Services facilitates the inclusion of students with hidden or obvious disabilities and health conditions into university life. Services are provided to students with a documented disability, be it physical, sensory, a learning disability or a mental health condition, temporary or long-term.

**Accessibility Services**
455 Spadina Ave., 4th Floor, Suite 400 (Just north of College Street) Toronto, Ontario, M5S 2G8  
Voice: 416-978-8060  
Fax: 416-978-8246  
TTY: 416-978-1902  
Email: accessibility.services@utoronto.ca  
[http://www.accessibility.utoronto.ca](http://www.accessibility.utoronto.ca)

**International Students**

The Centre for International Experience (CIE) offers many services to international students, including an orientation program in late August – early September, individual counselling whenever appropriate, and an English language program. In addition, the CIE contacts all foreign students once they have been accepted into the graduate program, to provide information and advice concerning immigration procedures (visa and student authorization forms), employment restrictions and authorization while in Canada, and other relevant matters.
Centre for International Experience  
Cumberland House, 33 St. George Street, and Koffler Student Centre, Room 201, 214 College Street  
(Tel) 416-978-2564 | (Fax) 416-978-4090  
http://cie.utoronto.ca/  
- Serves international students coming to U of T and domestic students looking to go abroad  
- University Health Insurance Plan (UHIP) registration at Cumberland House

Athletics & Recreation

A wide range of athletic facilities are available within the university, including an arena and stadium, playing fields, swimming pools, squash, tennis, badminton, volleyball and basketball courts, running tracks, archery and golf ranges, fencing salons, exercise and wrestling rooms, dance studios, saunas, lockers and a sports store. Instruction courses, exercise classes and fitness testing are regularly offered, and there is an extensive intramural program with several levels of competition in more than 30 sports.  
Other recreational activities and facilities are also available within the university, such as theatre, music, pubs, dances, art exhibitions, a wide range of clubs, debates lectures and seminars, reading rooms, cafeterias and chapels.  
University of Toronto students also enjoy easy access (walking distance or only a few minutes by subway) to symphony concerts, theatres, ballet, operas, movies, restaurants and shopping.

The Athletic Centre  
55 Harbord Street  
Toronto, Ontario M5S 2W6  
(Tel) 416-978-3437 | (Fax) 416-978-6978  
www.athletics.utoronto.ca  
- Multi-use health and fitness facility  
- Members of the Athletic Centre also enjoy access to the state-of-the-art facilities at the new Varsity Centre, located at 299 Bloor Street West.  
- All U of T students are automatically members of the Athletic Centre and Varsity Centre.

Hart House  
7 Hart House Circle  
Toronto, Ontario M5S 3H3

Graduate Student Associations

Every graduate student at the University of Toronto is automatically a member of the Graduate Student Union (GSU). Graduate students in the Department of Mathematics are also members of the Mathematical Graduate Students Association (MGSA). Between them, these associations sponsor many events every year, including parties, pubs, dances, outings and more serious endeavours such as seminars and lectures.

- To obtain a Social Insurance Number (in person only). Office hours: Monday-Friday, 08:30-16:00
  Supporting documentation must be original, e.g. student authorization and an offer of employment letter
- Takes an average of 4 weeks to process
Note: These are meant to be exam syllabi not course outlines. As such, topics are not necessarily ordered as in a logical development.

**Algebra**

1. Linear algebra. Students will be expected to have a good grounding in linear algebra, vector spaces, dual spaces, direct sum, linear transformations and matrices, determinants, eigenvectors, minimal polynomials, Jordan canonical form, Cayley-Hamilton theorem, symmetric, alternating and Hermitian forms, polar decomposition.

2. Group Theory. Isomorphism theorems, group actions, Jordan-Hölder theorem, Sylow theorems, direct and semidirect products, finitely generated abelian groups, simple groups, symmetric groups, linear groups, nilpotent and solvable groups, generators and relations.

4. Modules. Modules and algebras over a ring, tensor products, modules over a principal ideal domain, applications to linear algebra, structure of semisimple algebras, application to representation theory of finite groups.

5. Fields. Algebraic and transcendental extensions, normal and separable extensions, fundamental theorem of Galois theory, solution of equations by radicals.

No reference is provided for the linear algebra material.

References for the other material:

Dummit & Foote: *Abstract Algebra*, Chapters 1-14 (pp. 17-568).

Alperin & Bell: *Groups and Representations*, Chapter 2 (pp. 39-62), 5, 6 (pp. 107-178).

**Complex Analysis**

3. Conformal mapping, Riemann mapping theorem.

Note: The material in Ahlfors can largely be replaced by Chapters 10, 11, 12.1-12.6, and 14 of Rudin. But Ahlfors is the official syllabus for this material. The second edition of Ahlfors can be used if it is noted that Section 5.5 in the third edition is Section 5.4 in the second edition.)

**Real Analysis**

References:

1. Background: Royden, Chapters 1 and 2; Folland (Prologue).

2. Basic Measure Theory: Royden, Chapters 3 and 4, for the classical case on the real line (which contains all the basic ideas and essential difficulties), then Chapter 11, Sections 1-4, for the general abstract case; Folland, Chapters 1 and 2.

3. Differentiation: Royden, Chapter 5, for the classical case, then Chapter 11, Sections 5 and 6 for
the general case; Folland, Chapter 3 (For differentiation on \( |^a \), one can restrict the attention to the one dimensional case, which contains all the basic ideas and essential difficulties.)

4. Basic Functional Analysis: Royden, Chapter 10, Sections 1,2,3,4,8; Folland, Chapter 5, Sections 1,2,3,5.

5. \( L^p \)-Spaces: Royden, Chapter 6 for the classical case, and Chapter 11, Section 7 for the general case, Chapter 13, Section 5 for the Riesz Representation Theorem; Folland, Chapter 6, Sections 1 and 2, Chapter 7, Section 1.

6. Harmonic Analysis: Katznelson, Chapter 1, Chapter 2, Sections 1 and 2, and Chapter 6, Sections 1 to 4; Folland, Chapter 8, Sections 1,2,3,4,5, and 8. One can restrict the attention to the one dimensional case, as done in Katznelson.

**Topology**

1. local differential geometry: the differential, the inverse function theorem, smooth manifolds, the tangent space, immersions and submersions, regular points, transversality, Sard’s theorem, the Whitney embedding theorem, smooth approximation, tubular neighborhoods, the Brouwer fixed point theorem.

2. differential forms: exterior algebra, forms, pullbacks, d, integration, Stokes’ theorem, div grad curl and all, Lagrange’s equation and Maxwell’s equations, homotopies and Poincare’s lemma, linking numbers.

3. fundamental groups: paths and homotopies, the fundamental group, coverings and the fundamental group of the circle, Van-Kampen’s theorem, the general theory of covering spaces.

4. homology: simplices and boundaries, prisms and homotopies, abstract nonsense and diagram chasing. axiomatics, degrees, CW and cellular homology, subdivision and excision, the generalized Jordan curve theorem, salad bowls and Borsuk-Ulam, cohomology and de-Rham’s theorem, products.

**Partial Differential Equations**

1) **Basic Notions in Ordinary Differential Equations:** Fundamental theorem on existence and uniqueness of solutions of \( y' = f(x,y) \) when \( f \) is Lipschitz w.r.t. \( y \). Fixed point theorem, Picard iterates. (Various topics in PDE will also assume familiarity with undergraduate ODE material.)

2) Basic Notions in Linear Partial Differential Equations

b) **Parabolic PDEs:** Heat Equation, fundamental solution of the heat equation, mean value property, maximum principle, regularity properties, initial value problem for the heat equation, semigroups, gradient flows

c) **Hyperbolic PDEs:** Wave equation, fundamental solution of the wave equation, spherical means, Huygen’s principle, conservation of energy, finite speed of propagation, initial value problem for the wave equation, other hyperbolic PDEs.

3) Distributions; Fourier Transform

4) **Sobolev spaces; Weak Solutions:** Weak derivatives, Sobolev spaces \( W^{k,p} \), \( L^{2} \) based fractional Sobolev spaces \( H^{s} \), Approximation properties, Extensions, Traces, Sobolev inequalities, Poincaré lemma *Weak solutions and regularity theory is enmeshed with the topics on the exam.*

5) **Nonlinear PDEs:** *First-Order:* Method of characteristics, Hamilton-Jacobi equations, Conservation laws, weak solutions, shocks and rarefactions, uniqueness and entropy solutions,
Second-Order: gradient flows, linearization around special solutions, vanishing viscosity limit of Burger’s equation.

6) Calculus of variations: direct methods, convexity, weak-* continuity and compactness, first and second variations, Euler-Lagrange equation, Lagrange multipliers, constraints

APPENDIX B: APPLIED MATH COMPREHENSIVE AND MATHEMATICAL PHYSICS EXAMINATION

A student planning to specialize in applied mathematics or mathematical physics must pass three comprehensive exams, at least two of which are a general written exam (algebra, analysis (real and complex), topology, partial differential equations, or Probability). A third exam is set in agreement between the Graduate Coordinator and the advisor.

Other exams may be offered upon request.

APPENDIX C: PH.D. DEGREES CONFERRED FROM 2000-2018

2000
CALIN, Ovidiu (Differential Geometry) The Missing Direction and Differential Geometry on Heisenberg Manifolds
DERANGO, Alessandro (C*-Algebras) On C*-Algebras Associated with Homeomorphisms of the Unit Circle
HIRSCHORN, James (Set Theory) Cohen and Random Reals
MADORE, Blair (Ergodic Theory) Rank One Group Actions with Simple Mixing Z Subactions
MARTINEZ-AVENDANO, Rubén (Operator Theory) Hankel Operators and Generalizations
MERKLI, Marco (Mathematical Physics) Positive Commutator Method in Non-Equilibrium Statistical Mechanics
MIGHTON, John (Knot Theory) Topics in Ramsey Theory of Sets of Real Numbers
MOORE, Justin (Set Theory) Topics in Ramsey Theory of Sets of Real Numbers
RAZAK, Shaloub (C*-Algebras) Classification of Simple Stably Projectionless C*-Algebras
SCOTT, Jonathan (Algebraic Topology) Algebraic Structure in Loop Space Homology
ZHAN, Yi (PDE) Viscosity Solution Theory of Nonlinear Degenerate

2001
COLEMAN, James (Nonlinear PDE’s) Blowup Phenomena for the Vector Nonlinear Schrödinger Equation
IZADI, Farz-Ali (Differential Geometry) Rectification of Circles, Spheres, and Classical Geometries
KERR, David (C*-Algebras) Pressure for Automorphisms of Exact C*-Algebras and a Non-Commutative Variational Principle
OLIWA, Chris (Mathematical Physics) Some Mathematical Problems in Inhomogeneous Cosmology
PIVATO, Marcus (Mathematical Finance) Analytical Methods for Multivariate Stable Probability Distributions
POON, Edward (Operator Theory) Frames of Orthogonal Projections

37
SAUNDERS, David (Mathematical Finance) Mathematical Problems in the Theory of Incomplete Markets
SOLTYS-KULINICZ, Michael (Complexity) The Complexity of Derivations of Matrix Identities
VASILIEVIC, Branislav (Mathematical Physics) Mathematical Theory of Tunneling at Positive Temperatures
YUEN, Waikong (Probability) Application of Geometric Bounds to Convergence Rates of Markov Chains and Markov Processes on $\mathbb{R}^n$

2002
HERNANDEZ-PEREZ, Nicholas (Math. Finance) Applications of Descriptive Measures in Risk Management
KAVEH, Kiumars (Algebraic Geometry) Morse Theory and Euler Characteristic of Sections of Spherical Varieties
MOHAMMADALIKANI, Ramin (Symplectic Geometry) Cohomology Ring of Symplectic Reductions
SOPROUNOV, Ivan (Algebraic Geometry) Parshin’s Symbols and Residues, and Newton Polyhedra
SOPROUNOVA, Eugenia (Algebraic Geometry) Zeros of Systems of Exponential Sums and Trigonometric Polynomials
TOMS, Andrew (Operator Algebras) On Strongly Performed K$_0$ Groups of Simple C*-Algebras
VUKSANOVIC, Vojkan (Set Theory) Canonical Equivalence Relations
ZIMMERMAN, Jason (Control Theory) The Rolling Stone Problem

2003
ADAMUS, Janus (Analytic Geometry) Vertical components in fibre powers of analytic mappings
BUBENIK, Peter (Algebraic Topology) Cell attachments and the homology of loop spaces and differential graded algebras
HO, Nan-Kuo (Symplectic Geometry) The moduli space of gauge equivalence classes of flat connections over a compact nonorientable surface
JONG, Peter (Ergodic Theory) On the Isomorphism Problem of p-Endomorphisms
PEREIRA, Rajesh (Operator Theory) Trace Vectors in Matrix Analysis
STAUBACH, Wolfgang (PDE) Path Integrals, Microlocal Analysis and the Fundamental Solution for Hörmander Laplacians
THERIAULT, Nicolas (Algebraic Number Theory) The discrete logarithm problem in the Jacobian of algebraic curves
TING, Fridolin (Mathematical Physics) Pinning of magnetic vortices by external potential
TSANG, Kin Wai (Operator Algebras) A Classification of Certain Simple Stably Projectionless C*-Algebras

2004
AHMAD, Najma (Applied Math) The geometry of shape recognition via the Monge-Kantorovich optimal transportation problem (in conjunction with Brown University)
BRANKER, Maritza (Several Complex Variables) Weighted approximation in $\mathbb{R}^n$
CHEN, Oliver (Mathematical Finance) Credit barrier models
ESCOBAR AÑEL, Marcos (Mathematical Finance) Mathematical treatment of commodity markets
HUNG, Ching-Nam (Operator Algebras) The numerical range and the core of Hilbert-space operators
IVANESCU, Cristian (Operator Algebras) On the classification of simple C*-algebras which are inductive limits of continuous-trace C*-algebras with spectrum the closed interval $[0,1]$
KIRITCHENKO, Valentina (Analytic Geometry) A Gauss-Bonnet Theorem, Chern Classes and an
Adjunction
KUZNETSOV, Alexey (Mathematical Finance) Solvable Markov processes
LAWI, Stephan (Mathematical Finance) Exactly solvable stochastic integrals and q-deformed processes
SAVU, Anamaria (Probability) Hydrodynamic scaling limit of the continuum solid on solid model
SHAHBAZI, Zohreh (Differential Geometry) Differential Geometry of Relative Gerbes
SONG, Joon-Hyeok (Symplectic Geometry) Intersection Numbers in q-Hamiltonian Spaces
TIMORIN, Vladlen (Analytic Geometry) Rectifiable Pencils of Conics

2005
DE LOS SANTOS, Alejandro (Mathematical Finance) Liquidity risk estimation: non-gaussian AR models and quantile expansions
HAMILTON, Mark (Symplectic Geometry) Singular Bohr-Sommerfeld Leaves and Geometric Quantization
NIU, Zhuang (Operator Algebras) A classification of the tracially approximately sub-homogeneous C*-algebras
PATANKAR, Vijay (Number Theory) Splitting of Abelian Varieties
POLLANEN, Marco (Probability) Low discrepancy sequences in probability spaces

2006
CHAN, Jackson (Harmonic Analysis) Methods of variations of potential of quasi-periodic Schröedinger equation
DEJAK, Steven (Nonlinear PDE) Long-time dynamics of KdV solitary waves over a variable bottom
DOUGLAS, Andrew (Representation Theory) A classification of the finite dimensional indecomposable representations of the Euclidean algebra \( \mathfrak{e}(2) \) having two generators
FU, Guangyu (Probability) Random walks and random polynomials
HERNÁNDEZ CORTES, Janko (Mathematical Finance) Ergodic properties of some hidden Markov models with applications to mathematical finance
HO, Toan Minh (Operator Algebras) On the inductive limits of homogeneous algebras with diagonal morphisms between building blocks
KNAFO, Emmanuel (Number Theory) Variance of distribution of almost primes in arithmetic progressions
ROBERT GONZALEZ, Leonel (Operator Algebras) Classification of nonsimple approximate interval C*-algebras: the triangular case

2007
CALLAGHAN, Joe (Several Complex Variables) A Green’s function for \( \theta \)-incomplete polynomials
COWARD, Kristofer (Operator Algebras) The Cuntz semigroup as a classification functor for C*-algebras
LANGRIDGE, Allan (Number Theory) Values of Artin L-functions at \( s=1 \)
NAOT, Gad (Knot Theory) The Universal \( \mathfrak{sl}_2 \) link homology theory
ZHOU, Gang (Mathematical Physics) Asymptotic dynamics of trapped solitons of nonlinear Schröedinger equations with external potentials

2008
BAIRD, Thomas (Symplectic Geometry and Algebraic Topology) Moduli spaces of flat G-bundles over nonorientable surfaces
BROOKE, David (Representation Theory) Resolving Multiplicities in the Tensor Product of
Irreducible Representations of Semisimple Lie Algebras
CIUPERCA, Alin (Operator Algebras) Some Properties of the Cuntz Semigroup and an Isomorphism Theorem for a Certain Class of Non-simple C*-algebras
DONIN, Dmitry (Representation Theory and Differential Geometry) Lie Algebras of Differential Operators and D- Modules
FUCHS, Shay (Geometric Quantization) Spin^c quantization, prequantization and cutting
GERACI, Joseph (Quantum Information and Statistical Physics) On the Relation between Quantum Computation and Classical Statistical Mechanics
KLEIN, David (Symplectic geometry) Goldman Flows on Moduli Spaces of Flat Connections on Surfaces
KLEPER, Dvir (Operator Theory) Invariant Subspaces of Composition Operators on Weighted Hardy-Hilbert Spaces
LYNCH, Geoffrey (Algebraic Geometry) The Local Monodromy Operator as an Algebraic Cycle
QUINTANILLA, Maria Teresa (Mathematical Finance) Asymptotic Optimization of Risk Measures
SANTIAGO MORENO, Luis (Operator Algebras) Classification of Non-simple C*-algebras: Inductive Limits of Splitting Interval Algebras
SYLVESTRE, Jeremy (Representation Theory) Twisted Characters of Depth-zero Supercuspidal Representations of GL(n)
TIPU, Vicentiu (Number Theory) Polynomial Divisor Problems

2009
FITZPATRICK, Daniel Sean (Symplectic Geometry) Almost CR quantization via the Index of Transversally Elliptic Dirac Operators
HAMMERLINDL, Andrew (Dynamical Systems) Leaf Conjugacies on the Torus
HOVINEN, Bradford (Commutative Algebra) Matrix Factorizations of the Classical Discriminant
KISSOUNKO, Veniamine (Algebraic Geometry) The Converse of Abel’s Theorem
KREPSKI, Derek (Symplectic Geometry) Pre-quantization of the Moduli Space of Flat G-bundles
LEE, Brian C. (Symplectic Geometry) Geometric Structures on Spaces of Weighted Submanifolds
LEE, Paul Woon Yin (Symplectic Geometry and Dynamical Systems) Symplectic and Subriemannian Geometry of Optimal Transport
LI, Chao (Automorphic Forms and Representation Theory) A Local Twisted Trace Formula and Twisted Orthogonality Relations
MALONEY, Gregory (Operator Algebras) Dimension Groups and C*-algebras Associated to Multidimensional Continued Fractions
MORTARI DE LACERDA, Fernando (Operator Algebras) Tracial State Space of Higher Stable Rank Simple C*- algebras
SIGLOCH, Georg (Mathematical Finance) Utility Indifference Pricing of Credit Instruments
WESSLENN, Maria (Representation Theory) A Diagrammatic Description of Tensor Product Decompositions for SU(3)
ZHURAVLEV, Vladimir (Ergodic Theory) Two Theorems of Dye in the Almost Continuous Category
ZOU, Xiangqun (Partial Differential Equations) On Blow-up of One-dimensional Heat Equations with Polynomial Nonlinearities

2010
ARCHIBALD, Jana (Knot Theory) The Multivariable Alexander Polynomial on Tangles

ZHANG, Shuangjian (Optimum transportation and its applications) Existence, Uniqueness, concavity and geometry of the monopolist’s problem facing consumers with nonlinear price preferences
ZHENG, Yuan Yuan (Set Theory) Parametrizing topological Ramsey spaces

APPENDIX D: THE FIELDS INSTITUTE FOR RESEARCH IN MATH SCIENCES

The Fields Institute for Research in Mathematical Sciences was created in November 1991 with major funding from the Province of Ontario, the Natural Sciences and Engineering Research Council of Canada, and McMaster University, the University of Toronto, and the University of Waterloo. In September 1996 it moved from its temporary location in Waterloo to its permanent site, a new building located at 222 College Street in Toronto, next to the University of Toronto Bookstore. In addition to the three principal sponsoring universities about twenty universities across Canada are affiliated with it.

The mandate of the Fields Institute specifically includes the training of graduate students and this function is given a higher profile than at other similar mathematics research institutes. All major programs run at the institution contain graduate courses which students at any university affiliated with the institute may take for credit and the organizers of major programs are expected to set aside some money to make it possible for graduate students to participate in their program.
Students use their UTORid and password to log onto ACORN (www.acorn.utoronto.ca). This is similar to other U of T systems like Blackboard Portal or Degree Explorer. Instructions on how to activate your UTORid are provided to you when you pick up your TCard. If you are unable to obtain your TCard (and UTORid) before September, you can enable your JOINid to gain access to ACORN. For instructions on how to access ACORN using your JOINid, click here.

Visit www.help.acorn.utoronto.ca/how-to for a detailed, step-by-step guide to using ACORN for course enrolment, program enrolment, checking finances, updating address and contact information, printing or ordering transcripts, and more.

Graduate students in the Department of Mathematics are able to access either ACORN to:
- View, request, add, drop, or waitlist for courses
- View personal timetable
- View/Change address, telephone numbers, email, safety abroad address, and emergency contact information
- View academic history, including final grades
- Order transcripts
- View your financial account information (invoices, account details, payments)
- Defer payment of tuition (available to recipients of a funding commitment from the graduate unit and to students approved Ontario, Canada and some US government student loan)
- Update direct deposit details
- Print “Educational Credit” tax forms (T2202A)
- Order convocation tickets
- And more

Student Responsibility

While academic advisors, faculty, and staff are available to assist and advise, it is ultimately the student's responsibility to keep personal and academic information up to date at all times and to follow all University, SGS, departmental and program regulations, requirements and deadlines. ACORN makes it easier for students to check and correct this information. If questions arise about requirements, policies and procedures, students are responsible for seeking answers to these questions from staff and advisors.

Important Notes regarding Email and UTORid

The Department of Mathematics and other university offices may send important information to you by email. It is your responsibility to ensure that your email address, mailing/permanent address, and telephone numbers are up to date at all times.

Under University policy, students are required to maintain a University based email account (i.e., ending in utoronto.ca or toronto.edu), record it in ROSI, and regularly check for messages. That account may be forwarded to another personal account, but it is the University account to which the University will send official correspondence.

New students are advised to activate their UTORid early. Your UTORid provides you access not
only to your University email account but also to Blackboard, the University’s student portal and learning management system. Many courses use the portal to provide online materials, discussion groups, quizzes, and more. It is also used by the University and various student groups to make important announcements and administer elections.

**Declaration**

The use of ACORN to enrol in courses means that you agree to abide by all of the academic and non-academic rules and regulations of the University, the School of Graduate Studies, and the graduate unit in which you are registered. It also means that you agree to assume the obligation to pay academic and incidental fees according to the policies and requirements of the University of Toronto. You normally will use ACORN to add or cancel courses. If, for extraordinary reasons, you are unable to use the system, contact your graduate unit as soon as possible.

Students are expected to be responsible when using the system and should not attempt to flood it with requests, or to automate the process of course enrolment. Such activity may clog the system so that other students may be denied access or experience degraded performance. Any student(s) attempting such activity may be denied access to ACORN until after the relevant registration period.

**Checking course status**

Students are responsible for knowing the status of their course requests at all times. This information can be obtained through ACORN. The following are possible statuses:

- **REQ**: Course requested. Must be resolved/approved by the last date to add a course.
- **INT**: Course requested pending instructor approval in addition to co-ordinator's/advisor's approval.
- **APP**: Request approved. Student is enrolled in course.
- **REF**: Request denied. Student is not enrolled and may not make another request for this course via the web during this session.
- **CAN**: Course cancelled (student withdrew from course before deadline)
- **WAIT**: No room in the meeting section. Student has been placed on a waiting list based on category and will be enrolled automatically if space comes available.
- **DWAIT**: Student has cancelled place on the waiting list or been removed.

**Cancelling or withdrawing from courses**

Students may cancel or withdraw from individual courses up to certain deadline dates. Before doing this, however, students are advised to consult with their advisor or departmental office.

The deadlines to drop courses are as follows:

- **October 29, 2018** for Fall session full or half courses;
- **February 25, 2019** for full-year and Winter session courses;
- **May 24, 2019** for May-to-June F section courses; and
- **July 15, 2019** for July-to-August S section courses.

If you miss the deadline to drop a course:

1. Complete the [Add/Drop Course(s) form](#) and submit it to your graduate unit, along with a letter of rationale with supporting documentation (e.g. medical certificate).
2. The graduate unit will consider the request and, if supported, will forward the request to SGS for review.
3. If approved by SGS, the transcript notation of WDR (Withdrawn without Academic Penalty) will be assigned by SGS to the course. The WDR notation carries no credit for the course and is not considered for averaging purposes.

Some graduate units offer modular courses which have enrolment deadlines that do not conform to the deadlines above. Modular courses with non-standard start/end dates require the graduate unit to establish suitable drop dates. Please check with the graduate unit offering modular courses for the drop dates.

Dropping courses may have implications for your progress in the program. For details, check with your departmental graduate administrator.

Please note that withdrawing from all your courses does not constitute a withdrawal from your program. To do so, you must complete a Program Withdrawal Form. Dropping courses prior to deadlines or withdrawing from a program does not guarantee a refund. Information on fee refunds and deadlines is outlined at www.fees.utoronto.ca.

Final results
Final grades in courses can be accessed in ACORN by selecting Academic History.

Grades can be viewed after the following dates. If a grade is not available after these dates, contact your instructor or the graduate unit offering the course.

- July 18, 2018: Summer Session (first term)
- September 12, 2018: Summer Session (full summer and second term)
- January 16, 2019: Fall Session
- May 15, 2019: Winter Session (and Fall/Winter courses)

Important dates and deadlines:
Important dates and registration deadlines are available on the SGS website and can be found on the Sessional Dates webpage: http://www.sgs.utoronto.ca/Documents/SGS-Sessional-Dates-2018-2019.pdf

Using ACORN

Logging onto ACORN

Students use their UTORid and password to log onto ACORN (www.acorn.utoronto.ca). This is similar to other U of T systems like Blackboard Portal or Degree Explorer.

Updating & Checking Personal Information

Students may view or update personal information, such as address, telephone numbers, email address, emergency contact information, and Direct Deposit information.

ACORN ➔ Click on Profile & Settings from the Dashboard

Use the Add New option to enter new address and telephone information. Use the Edit option only to correct current information (e.g. typos).
Students can also select **Other Personal Information** to view information such as legal/immigration status. As legal status affects fees, all students are advised to check this information at the beginning of each year.

**Request to Register Without Payment (Tuition Fee Deferral) for graduate funding commitments**

Students who are receiving funding as part of the Department of Mathematics graduate funding package should request to register without payment on ACORN/ROSI. Students who are receiving funding outside of the funding commitment must make their request with the Department of Mathematics using the request form found on the SGS website.

**For OSAP, CSL and US student Loan recipients**

Students who have received notification of an award through the Ontario Student Assistance Program for their U of T program may make their fees arrangements through ACORN/ROSI up to the registration deadline instead of having to appear at SGS, as long as the amount of the loan covers the minimum payment and no outstanding fees are owing. The online arrangements may also be available for recipients of Canada Student Loans and some US government loans. Please see the Office of Student Accounts website ([www.fees.utoronto.ca](http://www.fees.utoronto.ca)) for details.

**Paying Tuition and Fees by Credit Card**

Students may use ACORN to pay tuition and fees by credit card by clicking the “Make a Payment” link on the left navigation or in the Finances card. Detailed instructions are available on the ACORN help site. A non-refundable 1.75% convenience fee will be applied by Moneris to all payments.

**Requesting Courses**

Students may begin requesting courses on July 11. *All course requests (requests for courses outside the department) must be approved by the graduate co-ordinator/academic advisor. Students must request their courses by no later than September 19. Courses will be approved or refused before the last date to add courses. Students should check the web for their request status before October 1.*

⇒ ACORN allows students to search for courses by code or keyword.

<table>
<thead>
<tr>
<th>Course number:</th>
<th>e.g. HIS2651Y</th>
</tr>
</thead>
<tbody>
<tr>
<td>Section Code:</td>
<td>usually F, S or Y. This indicates whether the course is offered in the fall session (F), the winter session, i.e., second term (S) or over both (Y).</td>
</tr>
<tr>
<td>Teaching Method:</td>
<td>all graduate courses have a teaching method of LEC (lecture).</td>
</tr>
<tr>
<td>Teaching Section:</td>
<td>the number of the class. Most graduate courses only have one teaching session (0101). Although there may be only one teaching section the information must still be entered on the system.</td>
</tr>
</tbody>
</table>

Note: Some courses may require instructor's approval in addition to that given by the co-ordinator/academic advisor.
Courses from outside the department

Not all graduate departments allow students to enrol in courses via the web. Before attempting to add a course outside your department check with your department and the host department about procedures.

Waiting Lists

Some courses or meeting sections have waiting lists. If the department offering the course has opted to allow a waitlist and either your enrolment category in the course or the course itself is full you can choose to join a waiting list. If sufficient space is opened in your enrolment category, you will automatically be placed in the course. It is your responsibility to check ACORN or ROSI to check on your status. The system will inform you of your place on the waiting list and how many spaces are allotted for your category. You may “wait” in multiple meeting sections but if you are enrolled in one meeting section you may not simultaneously wait for another. Your unit may set a limit on the number of waitlisted course in your requests. One day before the final date to enrol in courses all waiting lists will be suspended and normal enrolment procedures will apply. Consult your own unit to find out if you are permitted to join waiting lists. Consult the unit offering the course to see if a waiting list is being used.

Checking course status

Students are responsible for knowing the status of their course requests at all times. This information can be obtained via ACORN/ROSI. The following are the possible statuses:

REQ: Course requested. Must be resolved/approved by the last date to add a course.
INT: Course requested pending instructor approval in addition to co-ordinator's/advisor's approval.
APP: Request approved. Student is enrolled in course.
REF: Request denied. Student is not enrolled and may not make another request for this course via the web during this session.
CAN: Course cancelled (student withdrew from course before deadline)
WAIT: No room in the meeting section. Student has been placed on a waiting list based on category and will be enrolled automatically if space comes available.
DWAIT: Student has cancelled place on the waiting list or been removed.

Cancelling or withdrawing from courses

Students may cancel or withdraw from individual courses up to certain deadline dates. Before doing this, however, students are advised to consult with their advisor or departmental office. Please note that withdrawing from all your courses does not constitute a withdrawal from your program. To do so, you must complete a Program Withdrawal Form. Dropping courses prior to deadlines or withdrawing from a program without academic penalty does not guarantee a refund. Information on fee refunds and deadlines is outlined at www.fees.utoronto.ca.

Deadline dates:

July 16 First date students may request courses for the September 2018 session. (6:00 a.m. on ACORN/ROSI)
September 16 Registration deadline. Fees should be paid at a chartered bank by August 26 to allow for funds to be transferred in time for the registration deadline. Students not registered by the deadline will have their enrolment in courses cancelled and will not be permitted further access to enrol by the SWS.
September 21: Last date for students to request fall and full year courses (F, Y sections) "online" for approval by department.
September 24: Last date to add fall session and full year courses. Students will not be considered enrolled unless they have a course status of "APP".

October 29: Last date to 'cancel' (i.e. withdraw) from a fall (F) course.

January 21: Last date for students to request winter session/second term (S) courses. Courses requiring approval must be cleared with the department before this date.

February 25: Last date to 'cancel' (i.e. withdraw) from a full year (Y) or winter session/second term course.

**Final Results**

Final grades in courses can be accessed in ACORN by selecting **Academic History**.

Grades can be viewed after the following dates. If a grade is not available after these dates, contact your instructor or the graduate unit offering the course.

- **2018 Summer Session (first term)** July 18
- **(full summer and second term)** September 12
- **2018 Fall Session** January 16
- **2019 Winter Session (and Fall/Winter courses)** May 15

**System Availability**

⇒ ACORN has scheduled downtime on Mondays from 3:00 am – 6:00 am, but is otherwise normally available.

Note: On the first day of enrolment, the services open at 6:00.

Occasionally hours must be reduced for system maintenance. Please check the systems for details.

**URL**

ACORN can be accessed at [www.acorn.utoronto.ca](http://www.acorn.utoronto.ca).

Please remember to log out after each use.

---

(1) Graduate units may establish earlier deadlines for completion of coursework and may prescribe penalties for late completion of work and for failure to complete work, provided that these penalties are announced at the time the instructor makes known to the class the methods by which student performance shall be evaluated.

(2) The precise dates of commencement of courses are determined by the graduate units; students are urged to contact the relevant graduate units for information. SGS maintains the 13-week graduate instruction period; however, if a course does not fall into the traditional 13-week period, the graduate unit will inform students of important dates and deadlines in the course syllabus. The University welcomes and includes students, staff, and faculty from a wide range of cultural, traditional, and spiritual beliefs. As per the Policy on Scheduling of Classes and Examinations and Other Accommodations for Religious Observances, the University will “…arrange reasonable accommodation of the needs of students who observe religious holy days other than those already accommodated by ordinary scheduling and statutory holidays.” For more information, please refer to Accommodations for Religious Observances. The obligation not to discriminate on the basis of religion is a statutory duty arising from the Ontario Human Rights Code, which carries an obligation to accommodate religious requirements.

Graduate students may only enrol in undergraduate courses with the approval of their supervisor or graduate unit. Students are responsible for meeting the deadlines and requirements of the undergraduate course as presented in class and in the undergraduate division’s calendar. Graduate students will be graded under the graduate grading scale. Students should consult the appropriate undergraduate calendar for enrolment and dates.

Reading weeks for Faculty of Arts and Science undergraduate students take place November 5 to 9 for the Fall session, and February 18 to 22 for the Winter session. These are the dates which have been established for undergraduate students in the Faculty of Arts and Science. Not all Faculties offer reading weeks. To find out if your Faculty has a reading week, please contact them directly. SGS does not have a reading week.

(3) A final thesis is the corrected, approved version of thesis which is submitted to SGS following the Final Oral Examination.

(4) Students are considered registered when they have paid tuition and non-tuition fees or when they have completed the register without payment (fee deferral) process. A student’s status will change from “Invited” to “Registered” on ACORN when registration is complete.

Students who successfully register without payment should arrange to make payments throughout the academic
year as they receive funding from their scholarship, award, or other sources. Full payment of Fall/Winter session tuition and residence fees is due by April 30 at the latest.

Students registered in the Fall/Winter sessions are not normally charged Summer fees. For students starting in the Summer, fees will appear in your ACORN invoice accordingly.

(5) This allows up to 10 business days for processing and recording of the fee payment in the student’s ACORN account before the monthly service charge billing date for Unpaid Tuition and Non-Tuition fees.

(6) For final dates for completing degree requirements, students should consult their own graduate unit.

(7) Graduate units may establish earlier deadlines to add/drop courses but these dates must clearly be communicated to students. Please note that the last date to cancel a course or registration without academic penalty is not the same as the last date to be eligible for a refund.

(8) Academic fees for full-time doctoral students in the final year of their program, and who are before their maximum time limit, are pro-rated based on the 12-month academic year plus sessional incidentals. Academic fees for doctoral students in the final extension year, and who are beyond their maximum time limit, are prorated based on 50% of the annual domestic fee for the 12-month academic year plus sessional incidentals. For details, visit Final-Year Fees.

(9) Students who start their program in the Summer and OISE students who are only enrolled in July/August Summer courses are required to register by this date by paying the minimum tuition amount stated in their invoice.
