1. INTRODUCTION

The purpose of this handbook is to provide information about the graduate program of the Department of Mathematics, University of Toronto. It includes detailed information about the department, its faculty members and students, a listing of core courses offered in 2009-2010, a summary of research activities, admissions requirements, application procedures, fees and financial assistance, and information about similar matters of concern to graduate students and prospective graduate students in mathematics.

This handbook is intended to complement the calendar of the university’s School of Graduate Studies, where full details on fees and general graduate studies regulations may be found.

2. DEPARTMENT OF MATHEMATICS

Mathematics has been taught at the University of Toronto since 1827. Since the first Canadian Ph.D. degree in mathematics was conferred to Samuel Beatty (under the supervision of John Charles Fields) in 1915, more than 350 Ph.D. degrees and 900 Master’s degrees have been awarded in this University. Many of our recent graduates are engaged in university teaching, and a significant number hold administrative positions in universities or in the professional communities. Others are pursuing careers in industry (technological or financial), or in government.

The Department of Mathematics, University of Toronto is a distinguished faculty of more than sixty mathematicians. We have a large selection of graduate courses and seminars, and a diverse student body of domestic and international students, yet classes are small and the ratio of graduate students to faculty is low. We are in a unique position to take maximum advantage of the presence of the Fields Institute, which features special programs in pure and applied mathematics. Currently the department has 116 graduate students, of whom 32 are enrolled in the Master’s program, and 84 in the Ph.D. program.

Opportunities for graduate study and research are available in most of the main fields of pure and applied mathematics. These fields include real and complex analysis, ordinary and partial differential equations, harmonic analysis, nonlinear analysis, several complex variables, functional analysis, operator theory, C*-algebras, ergodic theory, group theory, analytic and algebraic number theory, Lie groups and Lie algebras, automorphic forms, commutative algebra, algebraic geometry, singularity theory, differential geometry, symplectic geometry, classical synthetic geometry, algebraic topology, set theory, set theoretic topology, mathematical physics, fluid mechanics, probability (in cooperation with the Department of Statistics), combinatorics, optimization, control theory, dynamical systems, computer algebra, cryptography, and mathematical finance.

We offer a research-oriented Ph.D., and Master’s program. Very strong students may be admitted directly to the Ph.D. program with a Bachelor’s degree; otherwise; it is normal to do a 1-year Master’s degree first. (Provisional admission to the Ph.D. program may be granted at the time of admission to the Master’s program.) The Master’s program may be extended to 16 months or 24 months for students who do not have a complete undergraduate preparation, or for industrial students engaged in a project.

There is a separate Master’s of Mathematical Finance Program not directly under the Department’s jurisdiction, but with which some of our faculty members are associated.

During their studies here, graduate students are encouraged to participate in the life of the close community of U of T mathematics. Almost all of them do some work in connection with undergraduate teaching, either as tutorial leaders, markers, or, especially in later years of their program, instructors. There is a Mathematics Graduate Student Association which organizes social and academic events and makes students feel welcome.

GRADUATE FACULTY MEMBERS

AKCOGLU, M.A. (Professor Emeritus) Ph.D. 1963 (Brown)
• Ergodic theory, functional analysis, harmonic analysis
ALEXAKIS, Spyros (Assistant Professor) Ph.D. 2005 (Princeton)
• Differential geometry and general relativity
ARKHIPOV, S. (Assistant Professor) Ph.D. 1998 (Moscow State)
• Geometric representation theory
ARTHUR, J. (University Professor, Mossman Chair) B.Sc. 1966 (Toronto), M.Sc. 1967 (Toronto), Ph.D. 1970 (Yale)
• Representations of Lie groups, automorphic forms
BARBEAU, E. (Professor Emeritus) B.Sc. 1960 (Toronto), M.A. 1961 (Toronto), Ph.D. 1964 (Newcastle)
• Functional analysis, optimization under constraint, history of analysis, number theory
• Theory of quantum invariants of knots, links and three manifolds
BIERSTONE, E. (Professor) B.Sc. 1969 (Toronto), Ph.D. 1973 (Brandeis)
• Singularity theory, analytic geometry, differential analysis
BINDER, I. (Associate Professor) Ph.D. 1997 (Caltech)  
- Harmonic and complex analysis, conformal dynamics
BLAND, J. (Professor) Ph.D. 1982 (UCLA)  
- Several complex variables, differential geometry
BLOMER, V. (Associate Professor) Ph.D. 2002 (Stuttgart)  
- Analytic number theory
BLOOM, T. (Professor) Ph.D. 1965 (Princeton)  
- Several complex variables
BRAVERMAN, Mark (Assistant Professor) M.Sc. 2003 (Toronto), Ph.D. 2008 (Toronto)  
- Complexity theory
BUCHWEITZ, R.-O. (Professor) Ph.D. (Dr.rer.nat.) 1976 (Hannover), Doctorat d’Etat 1981 (Paris VII)  
- Commutative algebra, algebraic geometry, singularities
BURCHARD, A. (Professor) Ph.D. (Georgia Tech) 1994  
- Functional analysis
CHOI, M.-D. (Professor) M.Sc. 1970 (Toronto), Ph.D. 1973 (Toronto)  
- Operator theory, operator algebras, matrix theory
COLLIANDER, James (Professor) Ph.D. 1997 (Illinois, Urbana-Champaign)  
- Partial differential equations, harmonic analysis
- Operators on Hilbert spaces, matrix theory and applications (including numerical analysis)
DEL JUNCO, A. (Professor) B.Sc. 1970 (Toronto), M.Sc. 1971 (Toronto), Ph.D. 1974 (Toronto)  
- Ergodic theory, functional analysis
DERZKO, N. (Associate Professor) B.Sc. 1970 (Toronto), Ph.D. 1965 (Caltech)  
- Functional analysis, structure of differential operators, optimization and control theory with applications to economics
ELLERS, E. (Professor Emeritus) Dr.rer.nat. 1959 (Hamburg)  
- Classical groups
ELLIOTT, G. A. (Canada Research Chair and Professor) Ph.D. 1969 (Toronto)  
- Operator algebras, K-theory, non-commutative geometry and topology
FRIEDLANDER, J. (University Professor) B.Sc. 1965 (Toronto), Ph.D. 1972 (Penn State)  
- Analytic number theory
- Spectral theory of Schrödinger operators and localization
GRAHAM, I. (Professor) B.Sc. 1970 (Toronto), Ph.D. 1973 (Princeton)  
- Several complex variables, one complex variable
GREENER, P.C. (Professor Emeritus) Ph.D. 1964 (Yale)  
- Partial differential equations
GUALTIERI, M. (Assistant Professor) Ph.D. 2003 (Oxford)  
- Differential geometry and mathematical physics
GUTH, Lawrence (Assistant Professor) Ph.D. 2005 (MIT)  
- Geometry and Functional analysis
HALPERIN, S. (Professor Emeritus) B.Sc. 1965 (Toronto), M.Sc. 1966 (Toronto), Ph.D. 1970 (Cornell)  
- Homotopy theory and loop space homology
HORI, K. (Assistant Professor) Ph.D. 1994 (Tokyo)  
- Gauge field theory, string theory
IVRII, V. (Professor) Ph.D. 1973 (Novosibirsk)  
- Partial differential equations
JEFFREY, L. (Professor) Ph.D. 1992 (Oxford)  
- Symplectic geometry, geometric applications of quantum field theory
JERRARD, Robert (Professor) Ph.D. 1994 (Berkeley)  
- Nonlinear partial differential equations, Ginzburg-Landau theory
JURDEJVIC, V. (Professor Emeritus) Ph.D. 1969 (Case Western)  
- Systems of ordinary differential equations, control theory, global analysis
KAMNITZER, Joel (Assistant Professor) Ph.D. 2005 (Berkeley)  
- Geometric and combinatorial representation theory
KAPOVITCH, V. (Associate Professor) Ph.D. 1997 (University of Maryland)
- Global riemannian geometry
KARSHON, Y. (Professor) Ph.D. 1993 (Harvard)
- Equivariant symplectic geometry
KHANIN, K. (Professor) Ph.D. 1983 (Landau Institute, Moscow)
- Dynamical systems and statistical mechanics
Khesin, B. (Professor) Ph.D. 1989 (Moscow State)
- Poisson geometry, integrable systems, topological hydrodynamics
KHOVANSKII, A. (Professor) Ph.D. 1973, Doctorat d’Etat 1987 (Steklov Institute, Moscow)
- Algebra, geometry, theory of singularities
KIM, Henry (Professor) Ph.D. 1992 (Chicago)
- Automorphic L-functions, Langlands’ program
KUDLA, S. (Canada Research Chair and Professor) Ph.D. 1971 (Harvard)
- Automorphic forms, Arithmetic geometry and Theta functions
LORIMER, J.W. (Professor) Ph.D. 1971 (McMaster)
- Rings and geometries, topological Klingenberg planes, topological chain rings
McCANN, R. (Professor) Ph.D. 1994 (Princeton)
- Mathematical physics, mathematical economics, inequalities, optimization, partial differential equations
McCool, J. (Professor Emeritus) Ph.D. 1966 (Glasgow)
- Infinite group theory
MEINRENKEN, E. (Professor) Ph.D. 1994 (Universität Freiburg)
- Symplectic geometry
MENDELSOHN, E. (Professor) Ph.D. 1968 (McGill)
- Block designs, combinatorial structures
MIKHALKIN, G. (Canada Research Chair and Professor) Ph.D. 1993 (Michigan State University)
- Geometry, topology and algebraic geometry
MILMAN, P. (Professor) Ph.D. 1975 (Tel Aviv)
- Singularity theory, analytic geometry, differential analysis
Murasugi, K. (Professor Emeritus) D.Sc. 1960 (Tokyo)
- Knot theory
MURNAGHAN, F. (Professor) Ph.D. 1987 (Chicago)
- Harmonic analysis and representations of p-adic groups
- Number theory
NABUTOVSKY, A. (Professor) Ph.D. 1992 (Weizmann Institute of Science)
- Geometry and logic
NACHMAN, A. (Professor) Ph.D. 1980 (Princeton)
- Inverse problems, partial differential equations, medical imaging
Peté, G. (Coxeter Assistant Professor) Ph.D. 2006 (UC, Berkeley)
- Probability
PUGH, C. (Distinguished Visiting Professor) Ph.D. (Johns Hopkins) 1965
- Dynamics and topology
PUGH, M. (Associate Professor) Ph.D. 1993 (Chicago)
- Scientific computing, nonlinear PDEs, fluid dynamics, computational neuroscience
Quastel, J. (Professor) Ph.D. 1990 (Courant Institute)
- Probability, stochastic processes, partial differential equations
Repka, J. (Professor) B.Sc. 1971 (Toronto), Ph.D. 1975 (Yale)
- Group representations, automorphic forms
ROCHON, F. (Assistant Professor) Ph.D. 2005 (MIT)
- Global analysis, analysis on manifolds, Differential geometry
Rooney, P.G. (Professor Emeritus) Ph.D. 1952 (Caltech)
- Integral operators, functional analysis
Roenthal, P. (Professor) Ph.D. 1967 (Michigan)
- Operators on Hilbert spaces
Rotman, R. (Associate Professor) Ph.D. 1998 (SUNY, Stony Brook)
- Riemannian geometry
3. THE GRADUATE PROGRAM

The Department of Mathematics offers graduate programs leading to Master of Science (M.Sc.) and Doctor of Philosophy (Ph.D.) degrees in mathematics, in the fields of pure mathematics and applied mathematics.

The M.Sc. Program

The M.Sc. program may be done on either a full- or part-time basis. Full-time students normally complete the program in one full year of study; part-time students may take up to three years to complete the program. The degree requirements are as follows:

1a. Completion of 6 half-courses (or the equivalent combination of half- and full-year courses), as described in section 4 of this handbook. The normal course load for full-time graduate students is 3 courses in the fall term and 3 in the spring term. Students who intend to proceed in the Ph.D. program are required to take four half-course credits in core material.

1b. Completion of the Supervised Research Project (MAT 4000Y). This project is intended to give the student the experience of independent study in some area of advanced mathematics, under the supervision of a faculty member. The supervisor and the student, with the approval of the graduate coordinator decide the
topic and program of study. The project is normally undertaken during the summer session, after the other course requirements have been completed, and has a workload roughly equivalent to that of a full-year course.

2. M.Sc. Thesis Option (less common than option 1). Students who take this option will be required to take and pass four half-courses and submit an acceptable thesis.

The Ph.D. Program

The Ph.D. program normally takes three or four years of full-time study beyond the Master’s level to complete. A Master’s degree is normally a prerequisite; however, exceptionally strong B.Sc. students may apply for direct admission to the Ph.D. program. Expected progress in the program is outlined in the following table:

<table>
<thead>
<tr>
<th>Year</th>
<th>Requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>Year 1</td>
<td>Completion of course work; Pass the comprehensive exams; Select a thesis advisor.</td>
</tr>
<tr>
<td>Year 2</td>
<td>Supervisory committee selected by graduate coordinator; First annual supervisory committee progress report due.</td>
</tr>
<tr>
<td>Year 3</td>
<td>Presentation of preliminary thesis results to supervisory committee.</td>
</tr>
<tr>
<td>Year 4</td>
<td>Thesis Content Seminar; Departmental PhD Thesis Examination; Final PhD Thesis Examination at the School of Graduate Studies.</td>
</tr>
<tr>
<td>Year 4 – October</td>
<td>Students interested in academic employment after the PhD must have major thesis results ready.</td>
</tr>
</tbody>
</table>

1. Coursework: Completion of at least 6 half-courses (or the equivalent combination of half- and full-year courses), as described in section 4 of this handbook. Normally, 6 half-courses are taken in the first year of study (3 half-courses in the fall term and 3 in the spring term). It is strongly recommended that the student take some additional courses in other years.

2. Comprehensive Examination: The student is required to pass comprehensive examinations in basic mathematics before beginning an area of specialization. The examinations in the four of the five general areas (real analysis, complex analysis, algebra, topology and partial differential equations) take place during a one-week period in early September. Exemptions from individual exams will be given if the student has obtained a grade of A- or better in the corresponding core course(s). Syllabi for the pure mathematics comprehensive exams appear in Appendix A. Copies of mock examination questions and/or past written examination papers are accessible to all candidates at [http://www.math.toronto.edu/graduate/pce](http://www.math.toronto.edu/graduate/pce).

Students with interests in applied mathematics should refer to Appendix B for possible alternate comprehensive exams.

All exams are to be taken within 13 months of entering the Ph.D. program unless the Examination Committee grants permission in writing for a deferral.

3. Supervisory Committee: Ph.D. student must select a supervisor by the beginning of the their second year in the PhD program. In accordance with School of Graduate Studies regulations, a supervisory committee will be established for each Ph.D. student who has chosen a research area and a supervisor. This committee consists of three faculty members including the supervisor. It is responsible for monitoring the student’s progress on an annual basis. By the end of the third year of Ph.D. studies, a student is required to present preliminary results of his/her research work to the supervisory committee. Information about general graduate supervision is available in the SGS document [Graduate Supervision, Guidelines for Students, Faculty, and Administrators](http://www.sgs.utoronto.ca/Assets/admin+support/Supervision+Guide.pdf).

4. Thesis: The main requirement of the degree is an acceptable thesis. This will embody an individual contribution to original research of a standard that warrants publication in the research literature. It must be written under the supervision of one or more members of the department. The student presents the thesis results in three stages.
(i) Thesis Content Seminar. This is an opportunity for the student to present his/her thesis results to department members. The presentation frequently takes place within one of the regular departmental research seminars.

(ii) Departmental Oral Examination. The student gives a 20-minute summary of the thesis and must defend it before a departmental examination committee. Copies of the thesis should be available two weeks before the departmental oral examination. The committee may approve the thesis without reservations, or approve the thesis on condition that revision be made, or require the student to take another departmental oral examination.

(iii) Final Oral Examination. Eight weeks after the successful completion of the departmental oral, the student proceeds to the final oral examination conducted by the School of Graduate Studies. The thesis is sent to an external reader who submits a report two weeks prior to the examination; this report is circulated to members of the examination committee and to the student. The examination committee consists of four to six faculty members; it is recommended that the external reader attend the examination. The student gives a 20-minute summary of the thesis which is followed by a question period.

5. Students are expected to become extensively involved in departmental life (seminars, colloquia and related activities).

Administration of the Graduate Program

A central administration authority called the School of Graduate Studies establishes the basic policies and procedures governing all graduate study at the University of Toronto. Detailed information about the School is obtained in its calendar, distributed to all graduate students during registration week, and in the admissions package that accompanies the application.

The Department of Mathematics has its own graduate administrative body—the graduate committee—composed of 6-8 faculty members appointed by the chair of the department, and five graduate students elected by the Mathematics Graduate Students Association. One of the faculty members is the graduate coordinator, who is responsible for the day-to-day operation of the program. The graduate committee meets frequently throughout the year to consider matters such as admissions, scholarships, course offerings, and departmental policies pertaining to graduate students. Student members are not permitted to attend meetings at which the agenda concerns confidential matters relating to other students. Information regarding appeals of academic decisions is given in the Grading Procedures section of the Calendar of the School of Graduate Studies. Students may also consult the Graduate Coordinator (or the student member of the departmental Graduate Appeals Committee) regarding information about such appeals.

General Outline of the 2009-2010 Academic Year

Registration August 10 – September 11, 2009
Fall Term Wednesday, September 9 – Friday, December 4, 2009
Spring Term Monday, January 4 – Friday, April 1, 2010
Reading Week February 15 – 19, 2010

Official Holidays (University Closed):

Labour Day Monday, September 7, 2009
Thanksgiving Day Monday, October 12, 2009
Christmas/New Year Monday, December 21, 2009 – Friday, January 1, 2010 (inclusive)
Family Day Monday, February 15, 2010
Good Friday Friday, April 2, 2010
Victoria Day Monday, May 24, 2010
Canada Day Thursday, July 1, 2010
Civic Holiday Monday, August 2, 2010
4. GRADUATE COURSES

The following is a list and description of the core courses offered to graduate students in the 2009-2010 academic year. These are the basic beginning graduate courses. They are designed to help the student broaden and strengthen his/her general background in mathematics prior to specializing towards a thesis. A student with a strong background in the area of any of the core courses should not take that particular course. In addition, graduate students may take several intermediate (300-level) undergraduate courses (listed in the Faculty of Arts and Science Calendar) if their background is felt to be weak in some area; no graduate course credit is given for these courses.

There are three other means by which graduate students may obtain course credit, apart from completing the formal courses listed on the following pages. In each of these cases, prior approval of the graduate coordinator is required.

1. Students may take a suitable graduate course offered by another department. Normally at least two-thirds of the course requirements for each degree should be in the Mathematics Department.

2. It is sometimes possible to obtain course credit for appropriately extensive participation in a research seminar (see Research Activities section).

3. It is also possible to obtain a course credit by working on an individual reading course under the supervision of one of the faculty members, provided the material covered is not available in one of the formal courses or research seminars. (Note: this is distinct from the MAT 4000Y Supervised Research Project required of all M.Sc. students.)

Most courses meet for three hours each week, either in three one-hour sessions or two longer sessions. For some courses, particularly those cross-listed with undergraduate courses, the times and locations of classes will be set in advance of the start of term. For other courses, the times and locations of classes will be established at organizational meetings during the first week of term, so that a time convenient for all participants may be arranged. During registration week, students should consult the math department website or the graduate bulletin board outside the mathematics office for class and organization meeting times and locations.

CORE COURSES

MAT 1000HF (MAT 457Y1Y)
REAL ANALYSIS I
L. Guth

Measure Theory: Lebesgue measure and integration, convergence theorems, Fubini’s theorem, Lebesgue differentiation theorem, abstract measures, Caratheodory theorem, Radon-Nikodym theorem.

Textbooks:
Elias Stein and Rami Shakarchi, Measure Theory, Integration, and Hilbert Spaces,

References:
G. Folland, Real Analysis: Modern Techniques and their Applications, Wiley
MAT 1001HS (MAT 457Y1Y)
REAL ANALYSIS II
L. Guth

**Fourier analysis:** Fourier series and transform, convergence results, Fourier inversion theorem, $L^2$ theory, estimates, convolutions.

**More functional analysis:** Banach spaces, duals, weak topology, weak compactness, Hahn-Banach theorem, open mapping theorem, uniform boundedness theorem.

**Textbooks:**
Elias Stein and Rami Shakarchi, *Measure Theory, Integration, and Hilbert Spaces,*

**References:**

MAT 1002HS (MAT 454H1S)
COMPLEX ANALYSIS
C. Pugh

3. Conformal mapping, Riemann mapping theorem.
4. Analytic continuation, Monodromy Theorem, Riemann surfaces.
5. Modular functions and the Picard Theorems.
6. Other topics are possible, like product theorems, elliptic functions, and non-isolated removability theorems.

**Main References:**
Stein and Shakarchi: *Complex Analysis*

**Additional References:**
Remmert: *Theory of Complex Functions*
Remmert: *Classical topics in Complex function theory*
Garnett and Marshall: *Harmonic Measure*
Needham: *Visual Complex Analysis*
Bierstone: Notes taken by Oleg Ivrii

MAT 1060HF
PARTIAL DIFFERENTIAL EQUATIONS I
A. Burchard

This is a basic introduction to partial differential equations as they arise in physics, geometry and optimization. It is meant to be accessible to beginners with little or no prior knowledge of the field. It is also meant to introduce beautiful ideas and techniques which are part of most analysts' basic bag of tools. A key theme will be the development of techniques for studying non-smooth solutions to these equations.
MAT 1061HS
PARTIAL DIFFERENTIAL EQUATIONS II
J. Colliander

This course will consider a range of mostly nonlinear partial differential equations, including elliptic and parabolic PDE, as well as hyperbolic and other nonlinear wave equations. In order to study these equations, we will develop a variety of methods, including variational techniques, and fixed point theorems. One important theme will be the relationship between variational questions, such as critical Sobolev exponents, and issues related to nonlinear evolution equations, such as finite-time blowup of solutions and/or long-time asymptotics.

The prerequisites for the course include familiarity with Sobolev and other function spaces, and in particular with fundamental embedding and compactness theorems.

Other topics in PDE will also be discussed.

Lawrence Evans: *Partial Differential Equations*

---

MAT 1100HF
ALGEBRA I
S. Arkhipov

Group Theory: Isomorphism theorems, group actions, Jordan-Hölder theorem, Sylow theorems, direct and semidirect products, finitely generated abelian groups, simple groups, symmetric groups, linear groups, nilpotent and solvable groups, generators and relations.

Ring Theory: Rings, ideals, Euclidean domains, principal ideal domains, and unique factorization domains.

Modules: Modules and algebras over a ring, tensor products, modules over a principal ideal domain,

Textbooks:
Dummit and Foote: *Abstract Algebra*, 2nd Edition

Other References:
Jacobson: *Basic Algebra, Volumes I and II.*
Cohn: *Basic Algebra*
M. Artin: *Algebra.*

MAT 1101HS
ALGEBRA II
S. Arkhipov

Fields: Algebraic and transcendental extensions, normal and separable extensions, fundamental theorem of Galois theory, solution of equations by radicals.
**Commutative Rings**: Noetherian rings, Hilbert basis theorem, invariant theory, Hilbert Nullstellensatz, primary decomposition, affine algebraic varieties, structure of semisimple algebras, application to representation theory of finite groups.

*Textbooks:*
Dummit and Foote: *Abstract Algebra, 2nd Edition*
Lang: *Algebra, 3rd Edition.*

*Other References:*
Jacobson: *Basic Algebra, Volumes I and II.*
Cohn: *Basic Algebra*
M. Artin: *Algebra.*

**MAT 1300HF**
**TOPOLOGY I**
**M. Gualtieri**

8 weeks of local differential geometry: the differential, the inverse function theorem, smooth manifolds, the tangent space, immersions and submersions, regular points, transversality, Sard's theorem, the Whitney embedding theorem, smooth approximation, tubular neighborhoods, the Brouwer fixed point theorem.

5 weeks of differential forms: exterior algebra, forms, pullbacks, integration, Stokes' theorem, div grad curl and all, Lagrange's equation and Maxwell's equations, homotopies and Poincaré's lemma, linking numbers.

*Recommended Textbook:*
John M. Lee: *Introduction to Smooth Manifolds*

**MAT 1301HS**
**TOPOLOGY II**
**L. Jeffrey**

5 weeks of fundamental groups: paths and homotopies, the fundamental group, coverings and the fundamental group of the circle, Van-Kampen's theorem, the general theory of covering spaces.

8 weeks of homology: simplices and boundaries, prisms and homotopies, abstract nonsense and diagram chasing, axiomatics, degrees, CW and cellular homology, subdivision and excision, the generalized Jordan curve theorem, salad bowls and Borsuk-Ulam, cohomology and de-Rham's theorem, products.

*Textbook:*
Allen Hatcher, *Algebraic Topology*

*Recommended Textbooks:*
M. Greenberg and J. Harper, *Algebraic Topology: A First Course*
John M. Lee: *Introduction to Smooth Manifolds*

**TOPICS COURSES AND CROSS-LISTED UNDERGRADUATE/GRADUATE COURSES**

A listing is available from the graduate website: [http://www.math.toronto.edu/graduate/courses/descriptions.html](http://www.math.toronto.edu/graduate/courses/descriptions.html)

**INDIVIDUAL READING COURSES**

Students requiring individual course numbers:
MAT 1900Y/1901H/1902H
READING IN PURE MATHEMATICS

Numbers assigned for students wishing individual instruction in an area of pure mathematics.

MAT 1950Y/1951H/1952H
READING IN APPLIED MATHEMATICS

Numbers assigned for students wishing individual instruction in an area of applied mathematics.

**COURSE IN TEACHING TECHNIQUES**

The following course is offered to help train students to become effective lecturers. It is not for degree credit and is not to be offered every year.

MAT 1499HS
TEACHING LARGE MATHEMATICS CLASSES
J. Repka

The goals of the course include techniques for teaching large classes, sensitivity to possible problems, and developing an ability to criticize one's own teaching and correct problems.

Assignments will include such things as preparing sample classes, tests, assignments, course outlines, designs for new courses, instructions for teaching assistants, identifying and dealing with various types of problems, dealing with administrative requirements, etc.

The course will also include teaching a few classes in a large course under the supervision of the instructor. A video camera will be available to enable students to tape their teaching for later (private) assessment.

**COURSES FOR GRADUATE STUDENTS FROM OTHER DEPARTMENTS**

(Math graduate students cannot take the following courses for graduate credit.)

MAT 2000Y  READINGS IN  THEORETICAL MATHEMATICS
MAT 2001H  READINGS IN  THEORETICAL MATHEMATICS I
MAT 2002H  READINGS IN  THEORETICAL MATHEMATICS II

(These courses are used as reading courses for engineering and science students in need of instruction in special topics in theoretical mathematics. These course numbers can also be used as dual numbers for some third and fourth year undergraduate mathematics courses if the instructor agrees to adapt the courses to the special needs of graduate students. A listing of such courses is available in the 2006-2007 Faculty of Arts and Science Calendar. Students taking these courses should get an enrolment form from the graduate studies office of the Mathematics Department. Permission from the instructor is required.)

**5. RESEARCH ACTIVITIES**

The Department of Mathematics offers numerous research activities, in which graduate students are encouraged to participate. Research seminars are organized informally at the beginning of each year by one or more faculty members, and are offered to faculty and graduate students on a weekly basis throughout the year. The level and specific content of these seminars varies from year to year, depending upon current faculty and student interest, and upon the availability and interests of invited guest lecturers. The following weekly research seminars have
been offered in the past few years:

**Research Seminars**

- Applied Math/PDE/Analysis/Seminar
- Toronto Probability Seminar
- Dynamical Systems Seminar
- Geometry and Topology Seminar
- Geometry Representation Theory Seminar
- Symplectic Seminar
- Algebraic Geometry Seminar
- Operator Theory Seminar
- Ganita Seminar
- Number Theory/Representation Theory Seminar
- Graduate Student Seminar
- CoolStuff Seminar
- Set Theory Seminar

**Note:** It is possible for graduate students to obtain course credit for sufficiently extensive participation in research seminars (see *Graduate Courses* section).

In addition to the weekly seminars, there are numerous special seminars throughout the year, a series of colloquia, and an active program of visiting lecturers. Graduate students are also welcome to attend lectures and seminars offered by other departments.

---

### 6. ADMISSION REQUIREMENTS AND APPLICATION PROCEDURES

Due to the large numbers of applications received in the Department of Mathematics each year, serious consideration will only be given to applicants with strong backgrounds in theoretical mathematics and with first class academic standing.

Application materials and admission requirements are available from the Department of Mathematics web-site: http://www.math.toronto.edu/graduate

Please read all instructions carefully and note the deadlines. In addition, the Department of Mathematics requires three letters of reference. The letters must be from *three* people familiar with your mathematical work, giving their assessment of your potential for graduate study and research in mathematics.

It is essential that all incoming graduate students have a good command of English. Facility in the English language must be demonstrated by all applicants educated outside Canada whose primary language is not English. This requirement is a condition of admission and should be met before application. There are three ways to satisfy this requirement: (1) Test of English as a Foreign Language (TOEFL): (a) internet-based test (iBT), minimum score of 22/30 for both the Writing and Speaking sections, with an overall minimum TOEFL score of 93/120, or (b) computer-based test, minimum score 237, with Essay Rating, minimum score 4.0, or (c) paper-based test, minimum score 580, with TWE (Test of Written English), minimum score 4.0; (2) a score of at least 85 on the Michigan English Language Assessment Battery (MELAB); (3) a score of at least 7.0 on the International English Language Testing Service (IELTS). Applicants are required to satisfy this requirement by January 15, so that scores are available at the time applications are considered.
7. FEES AND FINANCIAL ASSISTANCE

Fees

Information concerning fees is in the admissions package that accompanies the application forms. Listed below are the fees for the 2009-10 academic session, including incidental fees and the health insurance premium for visa students:

- Domestic students: Full-time $7,440
- Visa students: Full-time $16,417

Financial Assistance

Below is a list of those types of financial assistance most commonly awarded to mathematics graduate students in 2008-09. This information should also be applicable for students who wish to apply for the 2009-10 academic year; the deadlines for applications will be altered slightly in accordance with the 2009-10 calendar. Some awards are available from external funding agencies; others come from within the University.

Less common scholarships, offered by smaller or foreign funding agencies, are also available; information about these is generally distributed to the graduate offices of local universities.

Natural Sciences and Engineering Research Council (NSERC) Postgraduate Scholarships and Canada Graduate Scholarships

Value: approx. $17,300-$35,000 for a twelve month period
Eligibility: Canadian citizens, permanent residents; first class academic standing; full-time attendance
Application: apply through the university you are currently attending; application available at www.nserc.ca
Deadline: around mid October. Contact department for deadline.

Ontario Graduate Scholarships (OGS)

Value: approx. $5,000 per term for two or three terms
Eligibility: no citizenship restrictions; first class academic standing; full-time attendance at an Ontario university
Application: apply through the university you are currently attending or contact the OGS office in Thunder Bay, Ontario directly at 1-800-465-3957 (http://osap.gov.on.ca/eng/eng_osap_main.html).
Deadline: around mid October. Contact department for deadline.

Ontario Graduate Scholarship in Science and Technology (OGSST)

Value: approx. $15,000 for a twelve month period
Eligibility: Canadian citizens, permanent residents; first class academic standing; full-time attendance
Application: OGS application (see above).
Deadline: around mid October. Contact department for deadline.

University of Toronto Fellowships

Value: minimum $1,000
Eligibility: no citizenship restrictions; at least an A- average; full-time attendance at the University of Toronto
Application: graduate school applicants will be considered automatically
Deadline: January 15

Connaught Scholarship (not available for the 2009-10 academic year)

Value: $15,000 plus full fees for first year
Eligibility: no citizenship restrictions; full-time attendance at the University of Toronto; awarded only to exceptionally outstanding scholars
Application: graduate school applicants will be considered automatically
Deadline: January 15
**Research Assistantships**

*Value*: a limited amount of funds is available for academically worthy students  
*Eligibility*: no citizenship restrictions; full-time attendance; high academic standing  
*Application*: graduate school applicants will be considered automatically  
*Deadline*: January 15

**Teaching Assistantships**

*Value*: $38.76 per hour; number of hours per week will not exceed a maximum average of 8  
*Eligibility*: all full-time students who are accepted by the Mathematics Department (subject to satisfactory performance); may be held in conjunction with other awards  
*Application*: forms available in May from the Graduate Office, Department of Mathematics  
*Deadline*: early June

**Conference Travel Grant**

An important part of the research process is the presentation of one's work at scholarly conferences. The purpose of this program is to provide additional funds to enable graduate students in the Faculty of Arts and Science to travel to conferences where they will present their work.

*Value*: varies to a maximum of $1,000  
*Eligibility*: no citizenship restrictions; award holders must be in the funded cohort. Graduate students may hold only one Travel Grant during their time in the department  
*Eligible Expenses*: Conference registration and abstract submission costs, travel and living expenses  
*Application*: Applications available from the Math Graduate Office; deadline October 1  
*Selection Criteria*: Past academic performance, need to attend conference for professional development, quality of abstract. Preference will be given to students near the end of their degrees

**Department of Mathematics Policy on Financial Support of Graduate Students**

**Ph.D. Students**: At the time of admission to the Ph.D. program, students will normally be guaranteed support for a period of four years (five years in the case of students admitted directly from a Bachelor’s program), except that students who complete their degree requirements earlier will not be supported past the end of the academic year in which they finish. This guarantee will be made up of a mix of fellowships (including external awards such as NSERC, OGS), teaching assistantships and other sources of funding, at the discretion of the Department; and is subject to satisfactory academic progress, the maintenance of good standing, and in the case of teaching assistantships, satisfactory performance in that role, as judged by the Department. Absent this, support may be reduced, suspended, or discontinued.

In exceptional circumstances some funding may be provided to students in a subsequent year, but the Department expects that students will normally have completed their degree requirements within the four year period.

**M.Sc. Students**: Students who are granted provisional admission to the Ph.D. program at the time of admission will receive financial support, normally for one year only.

All full-time students in the first or second year of a Master’s program are eligible for teaching assistant work (subject to satisfactory performance).

**8. OTHER INFORMATION**

The Department of Mathematics is located in the heart of the University of Toronto, which in turn is located in the heart of downtown Toronto. Students therefore have access to a wide range of facilities and services. A list of these appear below.
Facilities and Services

Library Facilities
The University of Toronto Library System is the 4th largest academic research library in North America. It has over 4 million volumes. The Mathematical Sciences Library (MSL) is in the same building as the Mathematics Department. The vast majority of Mathematics journals are held at the MSL with some being held at the GSIC. The MSL also houses a selective collection of over 17,000 titles of mathematical books. The resources of the Library System are electronically linked by UTLink. It includes the catalogues of all libraries on campus, electronic abstracts and indexes, and other electronic resources such as electronic journals and internet. The MSL has computers with Netscape which give access to MathSciNet, UTLink and other electronic resources. It has study spaces for reading journals/books and studying. The Library has a photocopier for copying library materials. The MSL gives each graduate student a photocopying allowance. The Gerstein Science Information Centre (GSIC) also has a comprehensive collection of mathematical books up to 1998.

Computer Facilities
All faculty and graduate students are provided with accounts on the main departmental server and the departmental computer server (these servers are quad-processor SunFire 4200's with 16GB of RAM running the most recent version of Red Hat Enterprise Linux). These accounts give access to electronic mail facilities, which are also accessible via IMAPS or webmail, to the internet including the ability to put a webpage on the departmental webservice, many mathematical software packages (for example, Maple, Matlab, Mathematica, pari/gp, idl, octave, axiom), scientific and other graphics programs (most of the symbolic manipulators, gimp), computer language compilers (for example, fortran77, fortran95, C, C++, java), a rich mathematical software library, mathematical typesetting programs (TeX, LaTeX), etc. A dedicated compute lab with 14 machines is available. There are over 100 microcomputers currently available to the faculty and students. University managed wireless connectivity is available for most people in the department.

There are plans to add NAS storage in order to increase user storage resources, to consolidate locations for efficiency, and to expand access to IT supported teaching.

Housing
The university operates five graduate student residences-apartment complexes on or near the campus, ranging from unfurnished family apartments to the more conventional bed-and-board residences. In addition, the University Housing Service provides a listing of privately owned rooms, apartments and houses available for students to rent (see Contacts below). More detailed information about these facilities may be found in the admissions package which accompanies the application forms.

Students should keep in mind that accommodation could be expensive and limited, particularly in downtown Toronto. It is therefore advisable to make inquiries well in advance and to arrive in Toronto a few days prior to the start of term. Students can expect to pay anywhere between $500 to $900 per month on accommodation and from $300 to $500 per month on food, travel and household necessities.

Health Services
The University of Toronto Health Service offers medical services and referrals to private physicians for University of Toronto students. Most of these services are free of charge if you are covered under Ontario Health Coverage (OHIP), or the University Health Insurance Plan (UHIP) for visa students. OHIP application forms and information are available from the University Health Services (see Contacts below). UHIP coverage for visa students is compulsory and is arranged during registration at the International Student Centre.

Disabled Students
Services and facilities for disabled students are available at the University of Toronto. Further information may be obtained from the Coordinator of Services for Disabled Persons (see Contacts section below).

Foreign Students
The International Student Centre offers many services to foreign students, including an orientation program in late August – early September, individual counselling whenever appropriate, and an English language program. In
addition, the International Student Centre contacts all foreign students once they have been accepted into the graduate program, to provide information and advice concerning immigration procedures (visa and student authorization forms), employment restrictions and authorization while in Canada, and other relevant matters (see Contacts below).

Athletics & Recreation
A wide range of athletic facilities are available within the university, including an arena and stadium, playing fields, swimming pools, squash, tennis, badminton, volleyball and basketball courts, running tracks, archery and golf ranges, fencing salons, exercise and wrestling rooms, dance studios, saunas, lockers and a sports store. Instruction courses, exercise classes and fitness testing are regularly offered, and there is an extensive intramural program with several levels of competition in more than 30 sports.

Other recreational activities and facilities are also available within the university, such as theatre, music, pubs, dances, art exhibitions, a wide range of clubs, debates lectures and seminars, reading rooms, cafeterias and chapels.

University of Toronto students also enjoy easy access (walking distance or only a few minutes by subway) to symphony concerts, theatres, ballet, operas, movies, restaurants and shopping.

Graduate Student Associations
Every graduate student at the University of Toronto is automatically a member of the Graduate Student Union (GSU). Graduate students in the Department of Mathematics are also members of the Mathematical Graduate Students Association (MGSA). Between them, these associations sponsor many events every year, including parties, pubs, dances, outings and more serious endeavours such as seminars and lectures.

- Applications available from http://www.servicecanada.gc.ca/eforms/forms/nas2120e.pdf. Supporting documentation must be original, e.g. student authorization and an offer of employment letter
- Takes an average of 4 weeks to process
APPENDIX A: COMPREHENSIVE EXAMINATION SYLLABI

Algebra
1. Linear algebra. Students will be expected to have a good grounding in linear algebra, vector spaces, dual spaces, direct sum, linear transformations and matrices, determinants, eigenvectors, minimal polynomials, Jordan canonical form, Cayley-Hamilton theorem, symmetric, alternating and Hermitian forms, polar decomposition.
2. Group Theory. Isomorphism theorems, group actions, Jordan-Hölder theorem, Sylow theorems, direct and semidirect products, finitely generated abelian groups, simple groups, symmetric groups, linear groups, nilpotent and solvable groups, generators and relations.
4. Modules. Modules and algebras over a ring, tensor products, modules over a principal ideal domain, applications to linear algebra, structure of semisimple algebras, application to representation theory of finite groups.
5. Fields. Algebraic and transcendental extensions, normal and separable extensions, fundamental theorem of Galois theory, solution of equations by radicals.

No reference is provided for the linear algebra material.

References for the other material:
Dummit & Foote: Abstract Algebra, Chapters 1-14 (pp. 17-568).
Alperin & Bell: Groups and Representations, Chapter 2 (pp. 39-62), 5, 6 (pp. 107-178).

Complex Analysis
3. Conformal mapping, Riemann mapping theorem.

Note: The material in Ahlfors can largely be replaced by Chapters 10, 11, 12.1-12.6, and 14 of Rudin. But Ahlfors is the official syllabus for this material. The second edition of Ahlfors can be used if it is noted that Section 5.5 in the third edition is Section 5.4 in the second edition.)

Real Analysis
References:

1. Background: Royden, Chapters 1 and 2; Folland (Prologue).
2. Basic Measure Theory: Royden, Chapters 3 and 4, for the classical case on the real line (which contains all the basic ideas and essential difficulties), then Chapter 11, Sections 1-4, for the general abstract case; Folland, Chapters 1 and 2.
3. Differentiation: Royden, Chapter 5, for the classical case, then Chapter 11, Sections 5 and 6 for the general case; Folland, Chapter 3 (For differentiation on \[\mathbb{R}^n\] one can restrict the attention to the one dimensional case, which contains all the basic ideas and essential difficulties.)
4. Basic Functional Analysis: Royden, Chapter 10, Sections 1,2,3,4,8; Folland, Chapter 5, Sections 1,2,3,5.
5. $L^p$-Spaces: Royden, Chapter 6 for the classical case, and Chapter 11, Section 7 for the general case, Chapter 13, Section 5 for the Riesz Representation Theorem; Folland, Chapter 6, Sections 1 and 2, Chapter 7, Section 1.

6. Harmonic Analysis: Katznelson, Chapter 1, Chapter 2, Sections 1 and 2, and Chapter 6, Sections 1 to 4; Folland, Chapter 8, Sections 1, 2, 3, 4, 5, and 8. One can restrict the attention to the one dimensional case, as done in Katznelson.

**Topology**

1. local differential geometry: the differential, the inverse function theorem, smooth manifolds, the tangent space, immersions and submersions, regular points, transversality, Sard's theorem, the Whitney embedding theorem, smooth approximation, tubular neighborhoods, the Brouwer fixed point theorem.
2. differential forms: exterior algebra, forms, pullbacks, $d$, integration, Stokes' theorem, div grad curl and all, Lagrange's equation and Maxwell's equations, homotopies and Poincare's lemma, linking numbers.
3. fundamental groups: paths and homotopies, the fundamental group, coverings and the fundamental group of the circle, Van-Kampen's theorem, the general theory of covering spaces.
4. homology: simplices and boundaries, prisms and homotopies, abstract nonsense and diagram chasing, axiomatics, degrees, CW and cellular homology, subdivision and excision, the generalized Jordan curve theorem, salad bowls and Borsuk-Ulam, cohomology and de-Rham's theorem, products.

**Partial Differential Equations**

Note: This is meant to be an exam syllabus not a course outline. As such, topics are not necessarily ordered as in a logical development.

1) **Basic Notions in Ordinary Differential Equations**: Fundamental theorem on existence and uniqueness of solutions of $y' = f(x,y)$ when $f$ is Lipschitz w.r.t. $y$. Fixed point theorem, Picard iterates. (Various topics in PDE will also assume familiarity with undergraduate ODE material.)

2) **Basic Notions in Linear Partial Differential Equations**
   a) **Elliptic PDEs**: Laplacian: fundamental solution, properties of harmonic functions, Dirichlet and Neumann problems, Green's function, Poisson kernel representation for solution of Dirichlet problem on the unit disk in $\mathbb{R}^2$, Fourier series, Poisson's equation. **Weak solutions of second order elliptic PDE**: Lax-Milgram Theorem, ellipticity, energy estimates. **Regularity of weak solutions** interior and at the boundary. **Maximum principle**: weak, strong, Harnack inequality **Eigenvalues for second order linear elliptic operators**.

   b) **Parabolic PDEs**: Heat Equation, fundamental solution of the heat equation, mean value property, maximum principle, regularity properties, initial value problem for the heat equation, semigroups, gradient flows

   c) **Hyperbolic PDEs**: Wave equation, fundamental solution of the wave equation, spherical means, Huygen's principle, conservation of energy, finite speed of propagation, initial value problem for the wave equation, other hyperbolic PDEs.

3) **Distributions; Fourier Transform**

4) **Sobolev spaces; Weak Solutions**: Weak derivatives, Sobolev spaces $W^{k,p}$, $\mathcal{S}^k$ based fractional Sobolev spaces $H^s$, Approximation properties, Extensions, Traces, Sobolev inequalities, Poincaré lemma. **Weak solutions and regularity theory** is enmeshed with the topics on the exam.

5) **Nonlinear PDEs**: **First-Order**: Method of characteristics, Hamilton-Jacobi equations, Conservation laws, weak solutions, shocks and rarefactions, uniqueness and entropy solutions, **Second-Order**: gradient flows, linearization around special solutions, vanishing viscosity limit of Burger's equation.

6) **Calculus of variations**: direct methods, convexity, weak-* continuity and compactness, first and second variations, Euler-Lagrange equation, Lagrange multipliers, constraints

**References**

V. I. Arnold: *Ordinary differential equations* 1992

W. Hurewicz: *Lectures on ordinary differential equations* 1990
A student planning to specialize in applied mathematics must pass three comprehensive exams, at least two of which are a general written exam (algebra, analysis (real and complex), topology, or partial differential equations (PDE I and PDE II)). The following are samples of other exam topics.

**Combinatorics**
2) **Graph Theory**: Trees, connectivity, bipartite graphs, minimal spanning trees, Eulerian and Hamiltonian graphs, travelling salesman and chinese postman problems, matchings, chromatic number, perfect graphs.
3) **Design Theory**: Definitions, examples, finite fields, finite affine and projective spaces, Fisher’s inequality, symmetric designs, statement of Wilson’s Theorem and Wilson’s Fundamental Construction.
4) **Coding Theory**: Linear codes, sphere packing, Hamming and Plotkin bounds, perfect codes, polynomial over finite fields.
5) **Algorithms and Complexity**: Algorithms for listing permutations, combinations, subsets. Analysis of algorithms, basic concepts such as NP, and #P, and NPC.

**References**

**Control Theory and Optimization**
1) **Control Theory**: Qualitative properties of the reachable sets, Lie bracket and Lie determined systems, linear theory, stability and feedback. *(Reference: V. Jurdjevic: Geometric Control Theory, Cambridge University Press, Chapters 1,2 and 3)*
2) **Optimal Control**: Linear-quadratic problems, symplectic form, Lagrangians, the Riccati equation, the Maximum Principle and its relation to the calculus of variations. *(Reference: V. Jurdjevic: Geometric Control Theory, Cambridge University Press, Chapters 7, 8 ,11)*
3) **Linear Programming**: Convex analysis, simplex algorithm, duality, computational complexity and Karmarkar’s Algorithm. *(Reference: Bazaraa, Jarvis & Sherali: Linear Programming and Network Flows, Wiley, 1990, Chapters 2,3,4,6,8)*
4) **Nonlinear Programming**: Unconstrained and constrained nonlinear problems. Introduction to computational methods. *(Reference: Luenberger: Linear and Nonlinear Programming, Addison-Wesley, 1984, Chapters 6,7,10)*

**Fluid Mechanics**
It is expected that a student has a basic knowledge of real and complex analysis including ordinary differential equations. The extra mathematics required includes:
1) **Partial differential equations**: Laplace’s equation, properties of harmonic functions, potential theory, heat equation, wave equation. Solutions through series and transform techniques. Bessel functions and Legendre functions. Distributions. *(e.g. Duff and Naylor)*
2) **Asymptotic and perturbation techniques**: Asymptotic series solutions of ordinary differential equations, asymptotic expansion of integrals. Singular perturbation problems, boundary layer methods, WKB theory, multiple time-scale analysis. *(e.g. Bender and Orszag)*

Basic physical properties of fluids. Derivation of the Navier-Stokes equations for a viscous compressible fluid; vorticity; energy balance. Simple exact solutions of the Navier-Stokes equations. Slow viscous motions; Stokes flows; Oseen flow. Irrotational flow; sources and sinks; complex variable methods. Boundary layer approximation. Blasius flow; separation; jets and wakes. Rotating flows; geostrophic behaviour. Free surface flows; wave propagation. Simple unsteady boundary layer flows; Stokes layers. Shock waves in a tube; supersonic flow.

**General Relativity and Classical Mechanics**
1) Space-times as Lorentz manifolds. Differential geometry (curvature, etc.) and local and global properties of Lorentz manifolds.
2) Field equations of general relativity, stationary and static space-times. Exact solutions. Schwarzschild, Kruskal, Kerr solutions. Cosmological models: Robertson-Walker and Friedman models and their properties.
3) Cauchy problem for the field equations. Classification of space-times.
4) Symplectic geometry, symplectic structure of cotangent bundles, Poisson brackets.
5) Hamiltonian equations, canonical transformations, Legendre transformations, Lagrangian systems, Hamilton-Jacobi theory.

Hawking & Ellis: Large Scale Structure of Space-Time, Chapters 2,3,4,5.
O’Neill: Semi-Riemannian Geometry with Applications to Relativity.
Abraham & Marsden: Foundations of Mechanics, Chapters 3,4,5.
Wald: General Relativity, Chapters 1-6 and Appendices A-C and E

Mathematical Finance
1) Stochastic calculus: Martingales, Ito’s lemma, Girsanov’s theorem, stochastic differential equations, stopping times. (Reference: Baxter & Rennie, Financial Calculus)

Probability
The Probability Exam is a written exam and is administered by the Department of Statistics. It is based on material covered in STA 2111F and STA 2211S.
Topics covered include:
1) Elementary probability theory: Bernoulli trials, combinatorics, properties of standard probability distributions, Poisson processes, Markov chains
2) Probability spaces: measure theory and Lebesgue integration, extension theorems, Borel-Cantellis lemmas, product measures and independence, Fubini’s Theorem
3) Random variables and expectations: probability distributions, Radon-Nikodym derivatives and densities, convergence theorems such as dominated convergence, monotone convergence, etc
4) Limit theorems: inequalities, weak and strong laws of large numbers for sums of i.i.d. random variables, Glivenko-Cantelli Theorem, weak convergence (convergence in distribution), continuity theorem for characteristic functions, Central Limit theorems
5) Conditional probability and expectation: definitions and properties, statistical applications, martingales
6) Basics of Brownian motion and diffusions

References
Most of the above material is covered in any one of the following texts:
P. Billingsley: Probability and Measure 1995
L. Breiman: Probability 1992
R.M. Dudley: Real Analysis and Probability 1989

Quantum Field Theory
and von Neumann’s equation.

3) **Relativistic quantum field theory**: The Klein-Gordon and Dirac equations. Fock space for spin 0 and spin \( \frac{1}{2} \) particles. Creation and annihilation operators. Quantum fields as operator-valued distributions. The Gupta-Bleuler formalism for photons and gauge freedom.

APPENDIX D: THE FIELDS INSTITUTE FOR RESEARCH IN MATHEMATICAL SCIENCES

The Fields Institute for Research in Mathematical Sciences was created in November 1991 with major funding from the Province of Ontario, the Natural Sciences and Engineering Research Council of Canada, and McMaster University, the University of Toronto, and the University of Waterloo. In September 1996 it moved from its temporary location in Waterloo to its permanent site, a new building located at 222 College Street in Toronto, next to the University of Toronto Bookstore. In addition to the three principal sponsoring universities about twenty universities across Canada are affiliated with it.

The mandate of the Fields Institute specifically includes the training of graduate students and this function is given a higher profile than at other similar mathematics research institutes. All major programs run at the institution contain graduate courses which students at any university affiliated with the institute may take for credit and the organizers of major programs are expected to set aside some money to make it possible for graduate students to participate in their program.

APPENDIX E: 2009-10 COURSE ENROLMENT INSTRUCTIONS

Graduate students are able to access the student web service to change personal information (addresses and telephone numbers), view their academic record and current courses and to enrol in, request or drop courses.

General Information

Student Responsibility

While academic advisors, faculty and staff are available to assist and advise, it is ultimately the student's responsibility to keep personal and academic information up to date at all times and to follow all University, SGS, departmental and program regulations, requirements and deadlines. The student web service makes it easier for students to check and correct this information. If questions arise about requirements, policies and procedures, students are responsible for seeking answers for these questions from staff and advisors.

Note: the department and other university offices may send important information to you by email. Please make
sure that your email address, your mailing/permanent address and telephone number are up to date at all times. Under University policy, students are required to maintain a University based email account (e.g., UTOR or Math), record it in ROSI, and regularly check for messages. That account may be forwarded to another personal account but it is the University account to which the University will send official correspondence. New students are advised to validate their UTORID at the University Library early. The UTORID provides access not only to the @utoronto.ca email account but also to Blackboard, the University’s student portal and learning management system. Many courses use the portal to provide online materials, discussion groups, quizzes etc. It is also used by the University and various student groups to make important announcements and administer elections.

Declaration

Use of the SWS to enrol in courses means that you agree to abide by all of the academic and non-academic rules and regulations of the University, the School of Graduate Studies and department in which you are registered and assume the obligation to pay academic and incidental fees according to the policies and requirements of the University of Toronto. You normally use the SWS to add or cancel courses. If, for extraordinary reasons, you are unable to use the SWS contact your department office as soon as possible.

Users of the Student Web Service are expected to be responsible when using the SWS and should not attempt to flood the system with requests, or to automate the process of course enrolment. Such activity may clog the system so that other students may be denied access or experience degraded performance. Any student(s) attempting such activity may be denied access to the SWS until after the relevant registration period.

Personal Identification Number

Each time a student accesses ROSI via the web a personal identification is required in addition to a student number. The first time the system is accessed this will be derived from the student's date of birth (format YYYYMMDD). However, at that point the student will be required to change the PIN. Subsequent access to the system will require this new number which should be known only to the student. The PIN and student number together constitute an "electronic signature". Never give your PIN or student number to someone else.

Forgotten PIN numbers can be reset by the graduate office. To avoid having to contact the office in person or having to wait for office hours, students can enter answers to a set of questions on the SWS. When they first access the ROSI, the SWS will prompt students to choose three questions from a list. If at a later date the student forgets the PIN, the PIN can be reset online if two of the three questions are answered correctly.

Services Available

Change PIN number
View/Change address, telephone number, email
View final grades
View academic history
Add/request/drop courses
View current courses or course request and waitlist status
View student account information
Print “Educational Credit” tax forms (T2202A)
Order transcripts
Order graduation tickets
View transaction log

Updating Personal Information

Students may view or update their address, telephone number or email address through the Student Web Service.
When entering new information, the "add" option should be used. "Change" should only be used to correct information in an otherwise correct record (e.g. typos).

**Requesting Courses**

Students may begin requesting courses on August 10.

Students are required to fill out an enrolment form in September, and a course add/drop form for any changes made to their program after September. The enrolment form is available at [http://www.sgs.utoronto.ca/Assets/current/Student+Forms/Enrollment_Form.pdf](http://www.sgs.utoronto.ca/Assets/current/Student+Forms/Enrollment_Form.pdf).

The course add/drop form is available at [http://www.sgs.utoronto.ca/Assets/current/Student+Forms/Course+Add-Drop+Form.pdf](http://www.sgs.utoronto.ca/Assets/current/Student+Forms/Course+Add-Drop+Form.pdf).

The web service requires full information about a course when a request is being made. Please consult the attached lists from your department. Be sure to enter:

- **Course number:** e.g. MAT1000HF
- **Section Code:** usually F, S or Y. This indicates whether the course is offered in the fall session (F), the winter session or second term (S) or over both (Y).
- **Teaching Method:** all graduate courses have a teaching method of LEC (lecture).
- **Teaching Section:** the number of the class. Most graduate courses only have one teaching session (0101). Although there may be only one teaching section the information must still be entered on the system.

**Courses from outside the department**

Not all graduate departments allow students to enrol in courses via the web. Before attempting to add a course outside your department check with your department and the host department about procedures.

**Checking course status**

Students are responsible for knowing the status of their course requests at all times. This information can be obtained via the web service. The following are the possible statuses:

- **REQ:** Course requested. Must be resolved/approved by the last date to add a course.
- **INT:** Course requested pending instructor approval in addition to co-ordinator's/advisor's approval.
- **APP:** Request approved. Student is enrolled in course.
- **REF:** Request denied. Student is not enrolled and may not make another request for this course via the web during this session.
- **CAN:** Course cancelled (student withdrew from course before deadline)
- **WAIT:** No room in the meeting section. Student has been placed on a waiting list based on category and will be enrolled automatically if space comes available.
- **DWAIT:** Student has cancelled place on the waiting list or been removed.

**Cancelling or withdrawing from courses**

Students may cancel or withdraw from individual courses using the web service up to certain deadline dates. Before doing this however, students are advised to consult with their advisor or departmental office.

Students wishing to drop courses from their program to submit a course add/drop form to the department: [http://www.sgs.utoronto.ca/Assets/current/Student+Forms/Course+Add-Drop+Form.pdf](http://www.sgs.utoronto.ca/Assets/current/Student+Forms/Course+Add-Drop+Form.pdf)
Deadline dates:

August 10: First date students may request courses for the September 2009 and January 2010 sessions

August 31: Recommended payment or deferral date. Fees should be paid at a chartered bank by this date to allow for funds transfer in time for the September 11 registration deadline. Students not registered by the deadline will have their eligibility and courses cancelled and will not be permitted further access to enrol by the SWS.

September 30: Last date for students to request fall and full year courses (F, Y sections) "online" for approval by department.

October 7: Last date to add fall and full year courses. Students will not be considered enrolled unless they have a course status of "APP".

November 4: Last date to 'cancel' (i.e. withdraw) from a fall (F) course.

January 8 Last date for students to request winter/second term courses (S) "online" for approval by department.

January 15: Last date for students to request winter session/second term (S) courses. Courses requiring approval must be cleared with the department before this date.

February 26: Last date to 'cancel' (i.e. withdraw) from a full year (Y) or winter session/second term course.

Final Results

Final grades in courses can be accessed through “Transcripts and Academic History”. Grades can be viewed after the following dates. If a grade is not available, contact your instructor or the graduate unit offering the course.

- 2009 Summer Session (first term) July 29
- (full summer and second term) September 23
- 2009 Fall Session January 20
- 2010 Winter Session (and Fall/Winter courses) May 19

System Availability

The student web service is normally available at the following times:

- Monday 06:00 to 23:45
- Tuesday to Thursday 0:15 to 23:45
- Friday 0:15 to 18:00
- Saturday midnight to midnight
- Sunday midnight to 23:45

Occasionally hours must be reduced for system maintenance. Please check the Student Web Service for details.

URL
The Student Web Service (a.k.a. ROSI's Page) can be accessed at [www.rosi.utoronto.ca](http://www.rosi.utoronto.ca). Instructions are located there. Please remember to log out after each use.

(1) Graduate students may only enroll in undergraduate courses with the approval of their supervisor or graduate unit. Students are responsible for meeting the deadlines and requirements of the undergraduate course as presented in class and in the undergraduate division's calendar. Graduate students will be graded under the graduate grading scale.

(2) The precise dates of commencement of courses are determined by the graduate units; students are urged to contact the relevant graduate units for information. The University policy states that the first day of classes in the September session in all teaching divisions should not be scheduled on the first and second days of Rosh Hashanah.
(from 1 1/2 hours before sunset on Friday, September 18 to about 1 1/2 hours after sunset on Sunday, September 20) or on Yom Kippur (from about 1 1/2 hours before sunset on Sunday, September 27 to about 1 1/2 hours after sunset on Monday, September 28).

(3) Graduate units may establish earlier deadlines for completion of course work and may prescribe penalties for late completion of work and for failure to complete work, provided that these penalties are announced at the time the instructor makes known to the class the methods by which student performance shall be evaluated.

(4) For final dates for completing degree requirements, students should consult their own departments.

(5) Graduate units may establish earlier deadlines to add/drop courses. Please note that the last date to cancel a course or registration with no academic penalty is not the same as the last date to be eligible for a refund.
