

Mathematics MAT 1855HS Professor Robert McCann www.math.toronto.edu/mccann/1855
MATHEMATICAL PROBLEMS IN ECONOMICS

Lecture Hours:	Tuesday	14h10-15h40	FI 210
	Thursday	14h10-15h40	FI 210
Prof's Office Hours:	Thursday	15h45-16h30	BA 6124

Except: **no classes** on Tues Jan 15, Tues and Thurs Feb 19-21, Thurs March 28 or Tues Apr 2.

This course surveys a number of economic topics of current research interest in which mathematical developments have (and are expected to continue to) contribute crucial advances. These include the theory of matching and pricing, problems of asymmetric information, the principal-agent framework, auction theory, mechanism design, portfolio optimization and hedging. These topics are partly unified through a linear program approach in which the mathematical theory of optimal transport and its emerging relevance figure prominently. (Think of trying to pair N positrons with N electrons so as to minimize the average distance to annihilation.) We will also consider topics such as matching with unobservable heterogeneity and/or imperfectly transferable utility, and equilibria involving agents who respond nonlinearly to prices, which go beyond the linear programming framework.

The necessary mathematics (beyond measure theory and integration) will be developed in parallel with the applications, as will any necessary background in economics.

This course aims to help prepare students for research on related topics, as well as to maximize their benefit from concurrent related activities during the Fields Institute Interdisciplinary Semester on Quantitative Analysis and Modelling — including Ivar Ekeland's 6 April 2019 Kefauver Lecture and the 10-12 April Fields Symposium <http://www.fields.utoronto.ca/activities/18-19/economics-math>

Grading Scheme:	Attendance and participation 20 %
	Project (breakdown and deadlines below) 80 %

INDEPENDENT PROJECT

DEADLINES

- Settle on a topic (5%): Tuesday, Feb. 5
- Complete rough draft (25%): Tuesday, Mar. 12
- Final draft (50%): Thursday, April 4
- Optional: oral presentation for extra credit.

This project is intended to provide you with an opportunity to independently pursue some topic of interest to you within the framework of the course. Those taking this course for credit will be expected to prepare a written report on your topic (something on the order of 6-12 pages). Students also have the option to volunteer to give an oral presentation on the same topic in the last weeks of the semester.

By Tuesday Feb 5 each such student should communicate to me a topic related to themes of the course which you have decided to learn about on your own, and at least two written sources which you plan to use to research it (these could be articles or books). Your written project should summarize the interest, importance, and key contributions, methods and results which you learn. A complete written draft, in polished form, is due in class March 12, along with an indication of whether or not you would like to present your topic orally for extra credit. I will provide feedback on this, to be incorporated into your presentations and final draft. The sources listed above include many possible topics; others may be mentioned in class or on the course webpage, and you are certainly welcome to suggest your own proposals to me. In any case you should settle on a topic and format in consultation with me by end of January if possible and by Feb. 5 at latest.

Projects will be accepted up to 7 days late, at a penalty of 3% per day late (up to a maximum penalty of 21% of the marks earned). After 7 days the grade will be zero. Late penalties will be waived in cases of justified absence documented in writing to the satisfaction of the instructor.

INTEGRITY

The University treats cases of academic misconduct very seriously. Academic integrity is a fundamental value of learning and scholarship at the UofT. Participating honestly, respectfully, responsibly, and fairly in this academic community ensures that your UofT degree is valued and respected as a true signifier of your individual academic achievement.

The University of Toronto's Code of Behaviour on Academic Matters outlines the behaviours that constitute academic misconduct, the processes for addressing academic offences, and the penalties that may be imposed. You are expected to be familiar with the contents of this document. Potential offences include, but are not limited to:

Using someone else's ideas or words without appropriate acknowledgement. Obtaining or providing unauthorized assistance on any assignment.

Misrepresentation: Falsifying or altering any documentation required by the University, including (but not limited to) doctor's notes. Falsifying institutional documents or grades. All suspected cases of academic dishonesty will be investigated following the procedures outlined in the Code of Behaviour on Academic Matters. If you have any questions about what is or is not permitted in this course, please do not hesitate to contact me.

DIVERSITY AND ACCOMMODATIONS

Students with diverse learning styles and needs are welcome in this course. In particular, if you have a disability/health consideration that may require accommodations, please feel free to approach me and/or contact Accessibility Services at (416) 978-8060; accessibility.utoronto.ca

COMMUNICATIONS POLICY

Course material will be posted at the website www.math.toronto.edu/mccann/1855

Questions concerning the subject matter of the course should be brought to lectures or office hours. Administrative concerns including documentation justifying absences should go by e-mail to mccann@math.toronto.edu Please include the course number MAT 1855HS in the subject heading. I will endeavour to respond to emails within 72 hours. Project submissions should go to the same email address, but I would also appreciate receiving a paper copy of your projects in class.
