MAT137Y1 - LEC0501 - Calculus! - Oct 3, 2018

Jean-Baptiste Campesato

For Wednesday (Oct 10), watch the videos: • Continuity: 2.14, 2.15, 2.16, 2.17, 2.18.

MAT137Y1 - LEC0501 - Calculus! - Oct 3, 2018

# Is this proof correct?

### Claim:

$$\forall \varepsilon > 0, \ \exists \delta > 0, \ \forall x \in \mathbb{R}, \ 0 < |x| < \delta \implies |x^3 + x^2| < \varepsilon$$

### Proof.

- Let  $\varepsilon > 0$ .
- Take  $\delta = \sqrt{\frac{\varepsilon}{|x+1|}}$ .
- Let  $x \in \mathbb{R}$ . Assume  $0 < |x| < \delta$ . Then

$$|x^3 + x^2| = x^2|x+1| < \delta^2|x+1| = \frac{\varepsilon}{|x+1|}|x+1| = \varepsilon.$$

• I have proved that  $|x^3 + x^2| < \varepsilon$ 

## Compute a limit using geometry

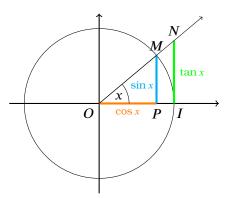

Compute the following limits:

For next week

$$\lim_{x \to 0} \cos(x)$$

## A question from last year's test (limit laws)

The only thing we know about the function g is that

$$\lim_{x \to 0} \frac{g(x)}{x^2} = 2.$$

Compute the following limits (or explain that they do not exist):

- $\mathbf{1} \lim_{x \to 0} \frac{g(x)}{x}$
- $2 \lim_{x \to 0} \frac{g(x)}{x^4}$
- $3 \lim_{x \to 0} \frac{g(3x)}{x^2}$

Jean-Baptiste Campesato

MAT137Y1 - LEC0501 - Calculus! - Oct 3, 2018

.

## Compute the following limits

- $\mathbf{1} \lim_{x \to \infty} \lfloor x \rfloor$
- $2 \lim_{x \to 0} x \left\lfloor \frac{1}{x} \right\rfloor$
- $3 \lim_{x \to 0} x^2 \left\lfloor \frac{1}{x} \right\rfloor$

Remember that, for  $x \in \mathbb{R}$  and  $m \in \mathbb{R}$ ,

$$\lfloor x \rfloor = m \Leftrightarrow m \le x < m+1$$
  
 $\Leftrightarrow x-1 < m \le x$

## Indeterminate form

Let f and g be functions defined near 0.

Assume 
$$\lim_{x\to 0} f(x) = \lim_{x\to 0} g(x) = 0$$
.

What can we conclude about  $\lim_{x\to 0} \frac{f(x)}{g(x)}$ ?

1 The limit is 1.

The limit does not exist.

- 2 The limit is 0.
- 3 The limit is  $\infty$ .

**5** We do not have enough information to decide.

## Proof of non-existence

#### Goal

We want to prove that

$$\lim_{x \to 0^+} \frac{1}{x} \quad \text{does not exist,} \tag{1}$$

directly from the definition.

- Write down formally the statement (1).
- Write down the structure of the formal proof should be, without filling the details.
- 3 Rough work.
- 4 Write down a complete formal proof.

# Proof of a limit law

### Theorem

Let f and g be functions with domain  $\mathbb{R}$ , except possibly a.

- $\lim_{x \to a} f(x) = L \in \mathbb{R}$ , and
- $\lim_{x \to a} g(x) = M \in \mathbb{R}$ .

### THEN

$$\lim_{x \to a} \left( f(x) + g(x) \right) = L + M$$

- 1 Write down formally what you want to prove.
- 2 Write down the structure of the formal proof.
- 3 Rough work.
- 4 Write down a complete formal proof.
