

## TRIGONOMETRIC AND RATIONAL FUNCTIONS

January 30<sup>th</sup>, 2019

## Integral of products of secant and tangent

To integrate

$$\int \sec^n x \tan^m x \, dx$$

- If  $\square{??}$ , then try the substitution  $u = \tan x$ .
- If  $\square{??}$ , then try the substitution  $u = \sec x$ .

*Hint:* You will need

- $\frac{d}{dx} [\tan x] = \dots$
- $\frac{d}{dx} [\sec x] = \dots$
- The trig identity involving sec and tan

## For next week

For Monday (Feb 4), watch the videos:

- Volumes: 10.1

For Wednesday (Feb 6), watch the videos:

- Volumes: 10.2
- Sequences: 11.1, 11.2

## Practice: Integrals with trigonometric functions

Compute the following antiderivatives.

Once you get them to a form from where it is easy to finish, you may stop: we are only interested in the method!

- |   |                         |
|---|-------------------------|
| ① $\int \sin^{10} x \cos x \, dx$         | ④ $\int \cos^2 x \, dx$ |
| ② $\int \sin^{10} x \cos^3 x \, dx$       | ⑤ $\int \sin^4 x \, dx$ |
| ③ $\int e^{\cos x} \cos x \sin^5 x \, dx$ | ⑥ $\int \csc x \, dx$   |

## Useful trig identities

$\sin^2 x + \cos^2 x = 1$	$\sin^2 x = \frac{1 - \cos(2x)}{2}$
$\tan^2 x + 1 = \sec^2 x$	$\cos^2 x = \frac{1 + \cos(2x)}{2}$

## Rational integrals

- 1 Compute  $\int \frac{1}{x+a} dx$
- 2 Reduce to common denominator  $\frac{2}{x} - \frac{3}{x+3}$
- 3 Compute  $\int \frac{-x+6}{x^2+3x} dx$
- 4 Compute  $\int \frac{1}{x^2+3x} dx$
- 5 Compute  $\int \frac{1}{x^3-x} dx$

## Repeated factors

- 1 Compute  $\int \frac{1}{(x+1)^n} dx$  for  $n > 1$
- 2 Compute  $\int \frac{x}{(x+1)^2} dx$
- 3 Compute  $\int \frac{3x+2}{(x+1)^2} dx$
- 4 Compute  $\int \frac{x^3}{(x+1)^2} dx$

## Irreducible quadratics

- 1 Compute  $\int \frac{1}{x^2+1} dx$  and  $\int \frac{x}{x^2+1} dx$ .
- 2 Compute  $\int \frac{2x+3}{x^2+1} dx$
- 3 Compute  $\int \frac{x^2}{x^2+1} dx$
- 4 Compute  $\int \frac{1}{x^2+x+1} dx$

## A reduction formula – Homework

Let  $I_n = \int_0^{2\pi} \sin^n x dx$ .

- 1 Compute  $I_0$  and  $I_1$ .
- 2 Starting with  $I_n$ , use integration by parts. Then use the main trig identity to obtain an equation involving  $I_n$  and  $I_{n-2}$ .
- 3 Compute  $I_8$  and  $I_{55}$ .
