Signs?

Why am I happy?

1. The ugly formulas for $\mathrm{L}, \mathrm{Q}, \mathrm{U}, \mathrm{V}$; from where they come?
2. Where is the relationship with $\mathrm{gl}(\mathrm{n})$, representations and intertwiners?
"God created the knots, all else in topology is the work of mortals."

4. Is this computable?

The Jones/Kauffman case. (ordinary Khovanov homology)
(Almost) all is understood, except the physics
