Low Confidence

- Factors that keep students from pursuing math are more likely to impact women & members of underrepresented groups

Perceptions of Mathematicians

- Factors that keep students from pursuing math are more likely to impact women & members of underrepresented groups

“These women students’ invisibility is not biddable. It is intentional. Their self-identification as “special” is not masculine. It is protective. And some are finding ways to participate.”

- Rodd & Bartholomew

4 Ways to Build Mathematical Understanding & Diversity

If you teach to  s

beginning

end

considering all

Who are your students today?

Who do *you* want your students to be at the end of this course or program?

Who are your students now?

Who do **future teachers** want your students to be at the end of this course or program?

Who are your students now?

Who do **future employers** want your students to be at the end of this course or program?

Who are your students now?

Who do **students**
want to be at
the end of this course or program?

Who do we want MAT135 students to be after this course?

me: possess deep UNDERSTANDING of calculus

science profs: CONFIDENT to approach math in new contexts

students: be SUCCESSFUL

future employers: capable PROBLEM SOLVERS

community: DIVERSE, as a group

Begin with the
end in mind.

- Stephen Covey

What do we want students to be able to do at the end of MAT135/136?

Identify & explain **overarching themes** of calculus

(5 points) Following a conference where experts discussed concepts that they believed were central to first-year calculus, Paul Zorn wrote: “The theme of approximation, it was agreed, is central to calculus – what it is and what it does.”

Suppose that you are writing the introduction to a MAT136 tutorial guide that explains how the theme of approximation seen in MAT135 continues through MAT136. Briefly explain how the **algebraic (limit) definition** of the definite integral is related to **numerical approximations** of the integral. Support your answer with a **graphical representation** demonstrating different aspects of the definition.

Unpack **mathematics in context** (e.g. scientific papers).

(9 points) As part of a test of the acoustics of a concert hall, consultants asked a trombone player to play a single note at maximum volume. Once the sound had reached its maximum intensity, the player stopped and the sound intensity was measured for the next 0.2 seconds at regular intervals. The consultants scaled the intensity measurements so that the maximum intensity at time 0 was 1, and then plotted their data on graph (a) below.

The consultants suspect that this data is best modelled by an exponential model of the form $I = I_0 10^{kt}$ where I is the relative intensity and t is time in seconds after the maximum intensity is reached. To check their suspicion, they plotted the graph (b) above, where the **logarithm** is a **base 10 logarithm**.

Design a
mathematical
story
for your
students

All humans like
stories.

- Trish Hall

Brain exposed to facts
(making sense of language)

Brain exposed to stories
(all sense areas active)

For a student to learn what we intend to teach them, they must have a need for it, where "need" means **intellectual need**, not social or emotional need.

Build a Bridge
for students'
learning

learning

where
students are

problem
sets?

where we want
students to be

the best bridge depends on context & students

Example: Problem Sets

Substantive feedback

Timely feedback

Form they will use in the future?

Future writing courses?

**Semester 1:
Build communication
skills**

**Semester 2:
Scientific poster
project**

uncomfortable with
math in unfamiliar
contexts

strong understanding
of math in novel
scientific papers

Example:

Scientific poster project in MAT136

- Based on scientific paper
- Describes context
- Highlights the use of an integral or derivative
- Includes a visual representation of that integral or derivative

learning

where
students are

in-class
activities?

where we want
students to be

Classroom environments in which students are provided opportunities to engage in mathematical investigation, communication, and group problem-solving, while also receiving feedback on their work from both experts and peers, have a positive effect on learning... we call on institutions of higher education, mathematics departments and the mathematics faculty... to invest time and resources to ensure that effective active learning is incorporated into post-secondary mathematics classrooms.

- Conference Board of the Mathematical Sciences Statement on Active Learning

2 simple active learning activities

vote on answer to
problem

think-pair-share

Active Learning techniques can play a particularly important role with regard to **equity, diversity,** and **access** in mathematics education.

Conference Board of the Mathematical Sciences
Statement on Active Learning

Advance
& reflect

We can only understand
through listening and
reflection.

- Stephen Brookfield

Example:
1-minute
paper
prompts
(CAT)

Name 1 thing about _____ you understand well and 1 thing that you are working to understand

When were you most engaged in class today? Most distanced?

What are the 3 most important concepts from class today?

Example:
Post-Class
Reflection
Questions

What happened?

Who made the class special?

What surprised me the most?

Did it live up to my expectations?

“People practicing
critically reflective
teaching ask questions
and play around with
different possibilities.”

- Stephen Brookfield

experiment!

seek help from experts

Example:

Confidence in Introductory Calculus

“I was good at math in high school, but failed the midterm. I guess I’m not cut out for university-level math.”

How to prevent post-midterm drops?
How to increase confidence in large class?

MAT135-Academic Success Centre collaboration

caution

All practices are rooted in **instructors** listening to *their* students

caution

All practices are rooted in **instructors** listening to *their* students

Relying on students to assess instructors **decreases faculty diversity.**

4 Ways to Build Mathematical Understanding & Diversity
